

SEYMOUR DAILY REPUBLICAN

VOLUME XXXIII NO. 76

SEYMOUR, INDIANA, MONDAY, MARCH 16 1914

PRICE TWO CENTS

STATION AGENTS MEET IN SEYMOUR

Talks Concerning Careful Handling of Package Freight Given by B. & O. S-W. Officials.

DIVISION WELL REPRESENTED

J. W. Coon, of Baltimore, and W. G. Curren, of Cincinnati, Make Principal Addresses.

Station agents of the Indiana division of the B. & O. Southwestern Railroad held an important meeting here Sunday at which time the careful handling of package freight was discussed. The meeting was called by Superintendent J. C. Hagerty and was one of a series that is being held on this division.

The agents were cautioned against the careless handling of freight received in less than earload lots and it was shown much of the loss and damage could be prevented if proper care were taken. They were instructed to exercise precaution in receipting for packages as it was stated that much of the loss comes from giving receipts to draymen for freight that never reaches the freight house. While agents and freight clerks are required to check all receipts frequently they give receipts to draymen without checking each package of freight. This is done especially during the rush hours of the day.

The principal addresses were made by J. V. Coon, of Baltimore, assistant to the general manager, and W. G. Curren, of Cincinnati, assistant general superintendent of transportation. Superintendent Hagerty presided at the meeting. Howard Adams, chief clerk to the superintendent, was secretary of the meeting.

The officials of the B. & O. Southwestern have found that these meetings are very helpful to the agents, yard masters and conductors for matters pertaining to the best methods of receiving and handling small lots of freight can be discussed to a good advantage. Present at the meeting Sunday were quite a number of conductors, yardmasters, depot foremen and clerks beside the agents.

Those attending the meeting were: C. C. Ware, roadman, Cincinnati; Trainmasters C. A. Plumly and U. G. Hooper, Seymour; T. J. Ewing, relief agent, North Vernon; C. N. Price, clerk, Oakley, O.; J. C. Small and W. J. Gibson, Norwood, O.; W. C. Snodgrass, Winton Place, O.; C. Hathorn, C. Fisher, George Hille, Stock Yards, O.; H. H. Dixon, Lawrenceburg; J. W. Mulford, Milan; J. E. Hudson, North Vernon; E. Massman, Seymour; C. G. Malott, Bedford; Ford Cox, conductor, Seymour; D. A. Jackson, conductor, New Albany; C. Q. Rogers, conductor, Seymour; J. A. Merchant, chief clerk district agent, Vincennes; H. J. Woodman, East Norwood; M. P. Tenney, G. M. Kettle, J. W. Cason, Brighton; S. H. Hunter, H. C. Watts, Aurora; C. H. Strang, Osgood; J. D. Harman, New Albany; O. B. Conkey, Mitchell; W. D. Hyatt, yardmaster, Mr. McFarren, claim department, Baltimore. The following were all from this city:

C. E. Catt, time keeper; John Os-

terman, clerk; O. E. Henderson, conductor, John Page, division operator; C. Baise, conductor; C. Bush, conductor; W. E. Hamer, conductor; James Goforth, conductor; D. R. Begley, train dispatcher; S. A. Rogers, road foreman of engines; H. S. Smith, chief train dispatcher; Lynn Robertson, conductor; William Umphrey, brakeman; Charles Dixon, dispatcher; A. E. Nichols, conductor; C. F. Ulmer, brakeman; C. H. Creager, examiner; R. S. Kinkada, brakeman.

JOHN WEDDELL SUDDENLY STRICKEN SUNDAY NIGHT

Well Known Creek Township Resident Succumbs to Attack of Cerebral Hemorrhage.

Coroner William Dailey was called to Salt Creek township this morning to conduct an inquest over the body of John Weddell, aged sixty-one years, who died suddenly Sunday night of cerebral hemorrhage. He lived with his son, Riley Weddell, about a mile from Kurtz. Mr. Weddell was sitting in his chair and reached for his cane which had fallen to the floor. As he stooped over he fell to the floor and was assisted back to the chair by his son.

In a few minutes he became unconscious and died about ten minutes later. He suffered a stroke of paralysis about a year ago and while he was able to walk about the house he never fully recovered. He was born and reared near Clear Springs and was well known in the western part of the county. He is survived by four children.

The funeral was held this afternoon conducted by Rev. Thomas Cummings. Burial at the cemetery near Kurtz.

THIRTEEN MORE CASES OF SMALLPOX AT BEDFORD

Public Quarantine Lifted and Schools Opened Again Today, Despite Additional Cases.

Special to the Republican. Bedford, Ind., March 16—Although thirteen new cases of smallpox have been reported to the city health board during the last three days, the schools were opened this morning and the public quarantine was lifted. The situation is not regarded as serious despite the new cases.

Quite a number of homes are quarantined but every precaution is being taken to prevent the spread of the disease at public meetings. School buildings and public halls have been fumigated. Six new cases were reported Saturday, three Sunday and six today.

INFANT CHILD SMOTHERED TO DEATH UNDER FEATHER BED

Mr. and Mrs. Joseph Hirtzel, Jr., Found Seven Months' Old Son Dead in Bed.

Lawrence J., the infant son of Mr. and Mrs. Joseph Hirtzel, Jr., was found dead in bed early Sunday morning his death having occurred from suffocation. The child was seven months old.

Late Saturday night the babe was placed at the foot of the same bed in which two other children were sleeping. Sometime during the night he rolled under the edge of a feather bed and was dead when his parents found him at 4 o'clock Sunday morning. Coroner William Dailey was called and after an inquest pronounced that the child's death was due to accidental suffocation.

TO BRING FARMER CLOSER TO CITY

Aim of Postmaster General Burleson in Establishing the "Farms Products Post."

WILL ELIMINATE MIDDLEMAN

By New Plan Fifty Pounds of Butter or Eggs May be Sent in First and Second Zones.

With the aim of eliminating the middleman's profit from the sale of small farm produce Postmaster General Burleson has inaugurated a plan whereby vegetables, eggs, butter and other articles may be sent by parcel post from the farmer to the consumer. The department will be known as the "farms products post" and such articles may be sent anywhere within the first and second zones provided they do not weigh more than fifty pounds.

A Washington dispatch which is of interest to farmers and city consumers is as follows:

Postmaster General Burleson has amplified the parcel post by the establishment of a "farm products post," which can be utilized by farmers and truckers for the shipment of crates of butter, eggs, vegetables, dressed poultry, weighing between twenty and fifty pounds, directly from the farm to the city kitchen. The service, which was announced by the Postmaster General today, is provided only for the first and second zones, a distance of approximately 150 airline miles.

Under the new regulations boxes and crates, similar to those used in the express service, when packed with farm products, will be carried outside mailbags and promptly delivered to the city consumer.

The "farm products post" is created for the purpose of opening up a cheap marketing avenue between the truck gardener and the city consumer with a view to reducing the cost of the table in populous centers. Investigations show that food products for which the farmer receives \$3.24 on his farm are retailed in the city for \$5.55 under the present system.

It is the idea of Postoffice and Agricultural Department experts, who have been studying this problem, that the farmer will accept \$4.25, postage prepaid, for the articles of food which he sells to the commission merchants for approximately \$3.24 and for which the city consumer pays \$5.55. If he does the city consumer will save about \$1.25 on every market basket costing under the old system \$5.55.

The Postoffice Department, in the statement, declares that the new regulations should prove a "boon to farmers and truckers." Under the old regulations the crates and boxes of farm products had to be securely packed and were limited in size so that they could be placed in mail bags.

Under the new regulations the ordinary crates used for the shipment of butter, eggs, fruits, berries, vegetables, dressed poultry and other articles by express will be accepted, provided that the maximum weight of these crates is not fifty pounds.

Packages under twenty pounds

must be securely packed so that they can be handled in mail sacks with ordinary mail.

Following the establishment of the "farm products post" steps must be taken to get the trucker and city consumer in business touch with each other.

TWO ALARMS ANSWERED BY FIRE DEPARTMENT SUNDAY

Brush Found Burning in City Park and Boys' Play House Also Burned to the Ground.

The fire department answered two alarms Sunday, one in the afternoon to the city park where a pile of brush was on fire and another at 7:45 o'clock on North Broadway where a small shanty burned. The brush heap was supposedly set on fire and no damage was done. It was feared that the flames and heat might damage some of the trees. The grass around the brush was also burning but this was extinguished without difficulty.

The alarm sent in during the evening was caused by a fire at a play house on North Broadway built by boys. The firemen saw that none of the surrounding buildings were in danger and did not attempt to extinguish the flames. There was no value placed on the structure which was made of old timber and boxes. It is believed that the fire was started by the boys although none admitted that they had been around the place during the evening. The flames cast a bright red reflection on the sky and a large number of people who thought that the fire was serious followed the hose wagon.

TWO BALES OF HAY AND STRAW HELD BY POLICE

Nathan Borinstein, a Junk Dealer, Questioned by Officers But Denies the Theft.

Chief of Police McCord questioned quite a number of people today to determine the ownership of a bale of straw and a bale of hay which were found in a barn adjoining the property of Nathan Borinstein, a junk dealer. The police were notified that the straw and hay had been found and after some inquiry called Borinstein to the jail but he denied that he was guilty of stealing it. However, he was unable to give a satisfactory explanation of how he came to have it placed in the barn.

Henry Bentley, a colored boy, told the police that he had been paid by Borinstein to put the bales in the barn. He said that he was under the impression that they belonged to him. The junk dealer at first refused to admit that he had given Bentley any money but later said he had paid him thirty cents. The bales were brought to the police station and an effort is being made by the officers to find out where they came from and to whom they belong.

See the cooking done on the Detroit Jewel gas range at the Public Service Company, Friday and Saturday, 20th and 21st. Free lectures. Everybody invited. Be sure to come. E. E. Howard, Domestic Science Demonstrator, in charge. A souvenir given each day. m20d

DEPUTIES GUARD THE COURT ROOM

Preliminary to Trial of Mayor Roberts, of Terre Haute, is Started This Morning.

PROTECTION PLAN ENFORCED

Even the Judge, Attorneys and Defendant Are Searched for Weapons Before Admitted.

Terre Haute, Ind., March 16—The preliminary to the trial of Donn M. Roberts, mayor of Terre Haute, charged with election frauds, began at 9 o'clock today. It was an argument to quash the indictment against him. The real trial, if Judge Charles M. Fortune, of the circuit court, sustains the indictments, will begin Friday morning.

Sheriff Denny Shea carried out his plans of protection to the letter. Each door was guarded by deputies, and every man entering the building was searched. Even Eph Inman, leading counsel for the defense, stood up while Sheriff Shea examined his pockets. Mayor Roberts, when he entered, was stopped by Sheriff Shea and examined for weapons.

At the main entrance to the courtroom stood Deputies McDonald and Robinson. Deputy Sheriff Carlos was back in the audience. Louis Reichman, attorney, and Richard Werneke, prosecuting attorney, were stopped at the door and searched. Newspapers, lawyers and every one else was subjected to the nimble hands of Sheriff Shea and his deputies. Even the judge on the bench was not exempt.

While this was going on the grand jury, with Chalmers Hamill as inquisitor, was making an investigation of the street car trouble Saturday night. Part of the evidence taken in the grand jury room here will be filed with Frank Dailey, United States district attorney, at Indianapolis.

The assertion is made that an interstate interurban car carrying mail between Terre Haute and Paris, Ill., was held up. This is the alleged interference with federal law that is to be investigated by the United States grand jury.

William G. Rucker Dead.

Dr. N. C. Rucker, of this city, received a letter this morning which stated that his brother, William G. Rucker, had died March 7 at his home at Mound Valley, Kansas. The deceased was eighty-six years of age and formerly lived here. He moved west about thirty years ago. He is survived by his widow and five grown children. He also leaves one sister, Mrs. Juliet Weathers, of Oklahoma. Mr. Rucker was a veteran of the civil war having enlisted in 25 Ind. Regiment, Co. G. He was the son of Mr. and Mrs. Nathan C. Rucker. The remains were interred at a cemetery at his home.

Special Demonstration.

Friday and Saturday, 20-21, of Gas Ranges. This Demonstration will be in charge of E. E. Howard, of the Detroit Stove Works, 9:30 a. m. to 5:00 p. m. daily. Interstate Public Service Company. m20d

TIME TO QUALIFY EXPIRED AT MIDNIGHT SATURDAY

Democratic Politicians Are Not Informed if J. Ross Robertson is in Prosecutor's Race.

Democratic politicians today are trying in vain to find out if J. Ross Robertson, county chairman, qualified as a candidate for the nomination for prosecuting attorney before midnight Saturday. He was given until that time to make it known if he intended to enter the race and while it is generally believed that he is a candidate nothing definite can be learned. He was away from Brownstown today on business and none of his friends there were authorized to say whether he was in the race. John H. Underwood, of Bedford, the present incumbent of the office, qualified several days before the time expired, and there was naturally much speculation as to Robertson's decision.

If Robertson is in the race the primary as arranged by the democratic state committee will be held in April. This means that the candidates will have to bear considerable expense which is estimated at about \$1,000. The primary will be conducted by two members of the state committee. If Robertson is not in the race Underwood will have no opposition as no other candidates qualified. Some of the local democrats are pretty wrathful over the action of the state committee as they declare that the question had been settled and the decision could have been made at the regular democratic primary without the necessity of placing the additional expense upon the two candidates.

WEATHER MAN SAYS IT'S TOO EARLY FOR "SPRING FEVER"

Weather Forecast Predicts That a Dash of Winter Will Come This Way Tonight.

For the relief of those who are beginning to experience the annual attack of "spring fever" the weather man will send a dash of cooler weather tonight. That is, he announces that the lower temperature is on the way and if it travels according to the schedule it will reach southern Indiana before morning. This forecast shatters the fondest hopes of those who were trusting that the winter was over and that the balmy springlike days would be enjoyed in the future.

Sunday was an ideal "May day" and many local automobilists took advantage of the weather for a Sunday "spin." The roads north of the city were said to be in fair condition although some of them were rough in places and were in need of a drag. The warm sun brought out some of the buds on the trees but none of the fruit trees are far enough advanced to be injured by a cold "snap."

Demonstration in Cooking.

Beginning March 20th to March 21st, from 9:30 a. m. to 5:00 p. m. daily. Grand demonstration in cooking on our salesroom floor at the Interstate Public Service Company by an expert teacher in Domestic Science. m20d

JOINT RESOLUTION.

Introduced in the house of representatives, December 4, 1911; reintroduced August 5, 1913, and again December 10, 1913, by Congressman Richmond P. Hobson.

Introduced in the senate December 10, 1913, by Senator Morris Sheppard. Whereas, Exact scientific research has demonstrated that alcohol is a narcotic poison, destructive and degenerating to the human organism, and that its distribution as a beverage or contained in foods lays a staggering economic burden upon the shoulders of the people, lowers to an appalling degree the average standard of character of our citizenship, thereby undermining the public morals and the foundation of free institutions, produces widespread crime, pauperism and insanity, inflicts disease and untimely death upon hundreds of thousands of citizens and blights with degeneracy their children unborn, threatening the future integrity and the very life of the nation: Therefore, be it

Resolved by the senate and house of representatives of the United States of America in congress assembled (two-thirds of each house concurring therein), That the following amendment of the constitution be, and hereby is, proposed to the states, to become valid as a part of the constitution when ratified by the legislatures of the several states as provided by the constitution:

"ARTICLE—

"Section 1. The sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof are forever prohibited.

"Section 2. Congress shall have power to provide for the manufacture, sale, importation, and transportation of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, or scientific purposes, or for use in the arts, and shall have power to enforce this article by all needful legislation."

ABSTINENCE—ONLY SAFE POSITION.

Total abstinence is certainly personal prohibition, and personal prohibitionists ought to vote for national prohibition. It is the moderate drinker that supports the saloon, sustains the brewery and the distillery and breeds the degenerates that fill our prisons, our hospitals, poorhouses and insane asylums. I have treated some 5,000 inebriates in my professional career, all before without exception were moderate drinkers, and in 600 carefully tabulated records of family history there was shown some form of degeneracy present in the direct line of descent and collateral branches, the use of narcotics in some form being present in the parental history. The descendants of the habitual moderate drinker do not escape the evil of the alcoholic taint, in some form of physical, mental, moral degeneracy. The only safety is total abstinence, and this must be impressed on the people.—L. D. Mason, M. D., Boston.

PROTECTION OF HOME.

Our chief object is the protection of the home from whatever hurts or destroys. We have learned through the stern yet oftentimes pitiful logic of events that alcoholic drink is the great home-destroying, heart-breaking evil. We are working for the overthrow of the legalized liquor traffic. Our last national convention unanimously voted to use its extensive equipment and its utmost influence in the effort to secure an amendment to the national constitution in accordance with the resolution introduced in congress by Hon. Richmond Pearson Hobson of Alabama, prohibiting the sale, the manufacture for sale, transportation, importation or exportation for sale of beverages or foods containing alcohol.—Lillian M. N. Stevens, president National W. C. T. U.

VIEWPOINT OF THE ENEMY.

We always scan the liquor papers with interest and growing satisfaction. They indicate from the viewpoint of the enemy the very encouraging advance of the temperance march, and the reports from their watch towers strengthen our faith and increase our courage. What is meant for a note of warning to the liquor interests comes as a word of cheer to the teetotaler. Indeed, if it were not that we object to supporting the liquor trade by subscribing for its periodicals, we should say to every anti-liquor man and woman, especially to the weak-kneed among us, "take a liquor journal." Their news columns and their editorial writings do not mince words when it comes to setting forth the situation.

CONSERVATION OF CITIZENSHIP.

In this day and age we are studying conservation from all its different angles and I know of no conservation so necessary as to conserve the young men who are to grow up and to take their places in the affairs of state and nation. No young man can start out in life handicapped by even the moderate use of liquor and make a success, and I believe that for the best interests of the future of our country we should have prohibition both in state and nation.—Governor Hanna of North Dakota.

BLASTS FROM RAM'S HORN

A face that a child will run from never pulls very hard toward the church.

There is still plenty of room at the top, but there isn't much anywhere else.

You can't tell how much religion there is in a church by counting the stained glass windows.

The world has been put where it is today by men who tightened their belts and tried to do their best.

The Bible makes it plain that the young man who tries to behave as much like a bulldog as he can is a fool.

No man can know the amazing power that lies dormant in him until God gets complete control of his individuality.

Many a preacher draws large pay for preaching that goes away over the heads of the people and yet thinks he is earning his salary.

One reason why the ministry of some preachers is as barren as the cursed fig tree is because they never expect God to be within ten miles of the meeting.

The preacher whose sermons make the biggest sinners feel most like shouting is going to lose a good deal of hay and stubble when the Lord's Greek fire strikes his work.

HOUSEHOLD SPICE

Speak well even to bad people.

Faults are always thick where love is thin.

By ignorance we mistake, by mistakes we learn.

Canned fruit is nothing new; they had preserved pears in the ark.

Wrongs do not leave off where they begin, but beget more mischief.

Discontent arises more often from our desire than from our needs.

What maintains one man's vice would often bring up two children.

Those who have always virtue in their mouths neglect it in their practice.

Learning makes a man or a woman fit company for themselves as well as others.

If human progress means anything, it means the enjoyment of the highest privileges.

An English servant girl who returned from the United States to visit friends was told that she looked "real aristocratic." Her reply was: "In America all of us domestics belong to the hire class."

M'CLARYGRAMS

When a man begins to take himself too seriously, everyone else finds him a joke.

The wisest person in the world would seem to be the one who knows his own weakness.

How cordially we would hate each other were it not for the graceful art of prevarication.

Many people are assiduously trying to cultivate a good memory, while many others who possess one, consider it a curse.

Some people get credit for extraordinary wisdom, merely because they make themselves unintelligible to ordinary common sense.

It is a sore day when one finds that circumstances prevent the fulfillment of his ambition; but an infinitely sadder one when he realizes that this is the case through his own limitations.

HOMESPUN HOMILIES.

Gabe Toots sez:

It takes three generations to git soupeating down right.

If it wasn't for moths there wouldn't be no Great White Ways.

If you want to see a cheap show go out and watch money buy popularity.

Fear of losing your job keeps more men straight than all the other laws ever thought up.

It won't be long now before they'll start to puttin' the turkey pictures back on the magazine covers.

There ain't nothin' ever goin' to happen to smooth over the differences between what you want and what you git.

WISE AND OTHERWISE.

A long talker is a short thinker.

Love is brotherhood. Passion is human nature.

The way to a woman's heart is through a millinery shop.

Gems In Verse

THE NORTHWEST.

O H, would ye hear, and would ye hear
Of the windy, wide northwest?
Faith, 'tis a land as green as the sea
That rolls as far and rolls as free,
With drifts of flowers, so many there be,
Where the cattle roam and rest.

Gh, could ye see, and could ye see
The great gold skies so clear,
The rivers that race through the pine shade dark,
The mountainous snows that take no mark,
Sun lit and high on the Rockies stark,
So far they seem as near.

Then could ye feel, and could ye feel
How fresh is a western night,
When the long land breezes rise and pass
And sigh in the rustling prairie grass,
When the dark blue skies are clear as glass
And the same old stars are bright.

But could ye know, and forever know
The word of the young northwest,
A word she breathes to the true and bold,
A word she whispers to the false and cold,
A word that never was spoken or sold,
But the one that knows is best.

—Moira O'Neill.

LOVE BEYOND THE STARS.

W HEN that I loved a maiden
My heaven was in her eyes,
And when they bent above me
I knew no deeper skies.

But when her heart forsook me
My spirit broke its bars
For grief beyond the sunset
And love beyond the stars.

When that I loved a maiden
She seemed the world to me;
Now is my soul the universe,
My dream the sky and sea,
There is no heaven above me,
No glory binds or bars
My grief beyond the sunset
And love beyond the stars.

—Alfred Noyes

WHEN WE WALKED IN ARCADY.

W HEN we two walked in Arcady
How sweet the summers were!
How thick the branches overhead,
How soft the grass beneath our tread,
And thickets where the sun burned red
Were full of wings as I, my dear,
When we two walked in Arcady
Through paths young hearts prefer.

SINCE we two walked in Arcady
(How long ago it seems!)
Flick hopes have died disconsolate,
The calm-eyed angel men call Fate
Stands with drawn sword before the gate
That shuts out all our dreams, my dear,
Since we two walked in Arcady
Beside the crystal streams.

B EYOND the woods of Arcady
The little brooks are dry,
The brown grass nestles in the heat,
The roads are rough beneath our feet,
Above our heads no branches meet,
And yet, although we sigh, my dear,
Beyond the woods of Arcady
We see more of the sky.

—Caroline Duer.

ABSENCE.

S OMETHING is missing in the sky and sea;
Something is lacking in the daisy's grace;
Something has vanished from the mystic charm
Which erstwhile haunted each familiar place.

The east wind drives the white surf
To my feet,
From north and south the merry winds blow free,
The south wind whispers songs I once held sweet,
But not one brings a message back to me.

Something is missing in the sky and sea,
Something has stolen from the sun its gold,
And something dumbly waits within my heart
Until the hours of parting shall be told.

—Author Unknown.

TEARS.

I F every wish were granted,
If every hope came true,
If every seed we planted
A lovely blossom grew,
If every day were sunny
And every one were wise,
There'd be no sweet in prize,
There'd be no joys to prize.

If we knew that tomorrow
Would be just like today,
With not one touch of sorrow,
No care to spoil our play,
No doubt and no denying,
No heartaches and no fears,
Then vain were all our living,
We'd crave the joy of tears.

We'd sigh for sacred sorrow,
We'd long to feel the rain,
And we should yearn to borrow
The blessedness of pain,
For more than all the pleasure
That came and quickly fled
Adown the years we treasure
The tears that we have shed.

—Detroit Free Press.

"MY GALILEE."

M Y Galilee lies not so far away;
Heedless of any path by man's foot sought,
Many a time I wander there in thought.

No matter what the season, night or day,
Amid its charm of field and slope to stray
Yet most I seek it when the sun has wrought
Summer's full splendor, when the winds have caught
The wildwood's fragrance in their gentlest sway.

A low farmhouse above a shady dale,
With beehives looming high old fashioned,
Whist through green boughs a child looks, bold to towers
From radiant clouds, and, like weird minstrelsy,
Over every grief in this, my Galilee,
Fears echoes of primeval joy prevail!

—William Struthers

NOT ALL BLIND.

I T may be true that love is blind—
This fact brings no surprise—
But love should always bear in mind
That others have good eyes.

—Selected.

WHEN A MAN'S MARRIED

COPYRIGHT, 1913, BY THE NEW YORK EVENING TELEGRAM (NEW YORK HERALD CO.). All Rights Reserved.

Men's Fashions

Out on this latest fashion!
We hold it is not right—
Please give us your compassion—
That clothing should be tight!
'Tis not that we are modest,
Nor yet that we are vain,
But some shapes are the oddest!
We'd spare their owners pain.

There's Jim, he's narrow chested,
And Tom's bowed as to leg;
Bill, of his coat divested,
Looks like an ostrich egg.
And most men are defective
(Of course, excepting me).
These shoulder pads? Corrective,
But really needless. See?

'Tis very well for women,
Their charms still make a hit.
With furbelows and trimming
They get away with it.
But we need baggy garments
To hide our figures' sins,
For we are ugly varnishes,
Fats, mediums and thins.

—Chicago News.

HOW TO PLAY NEWCOMB; GAME BECOMING POPULAR.

It is Devised With All the Essentials
of Outdoor Exercise.

The growth of newcomb has attained such proportions that a handbook on the sport has been issued. The game was introduced at Newcomb college, Tulane university, New Orleans, in 1893.

A clear space is all that is needed to lay out the "field" for newcomb. Gymnasium, schoolyard or athletic field may be used with the same results. A basketball court indoors affords sufficient room for the game. The ball is of the same size and material as the official basketball.

Two courts of equal size, marked by chalk lines on the four sides, with a "neutral zone" between the two sections, make the field. At each end of the neutral zone a post is erected, and from these posts a rope is stretched across the zone, dividing the field and zone into two equal parts. The object of the game is to throw the ball over this rope and make it strike any clear space in the opponents' court. At the beginning of each game the captains jump for the ball, as the centers jump in basketball, but the effort is made to catch it or bat it into one's own court. Then the captains resume their places, and the one who has won the toss has the first throw.

A touchdown is scored whenever the ball touches a clear space in the enemy's court. This counts one point. A touchdown is also scored by the team sending the ball, when one of the opponents bats it, into the neutral zone. Fouls may be made by hitting the rope, throwing under the rope, throwing the ball so it strikes in the neutral zone, unnecessary delay in throwing the ball after receiving it or throwing the ball while either foot is outside the boundary line. At the conclusion of each half the fouls are added up, an equal number, amounting to the low team score in fouls, is canceled from each team's slate, and all the excess fouls are added to the score of the opponents. A dropped ball scores

one point for the opposing team.

The ball always must be thrown with one hand, but exceptions are allowed in the case of quick passing, when two hands may be used.

Professor Clara Gregory Baer, director of physical education at Newcomb college, is the leading figure in the sport. She says:

"The object of the game is to secure a touchdown. Therefore, when on the receiving side guard the ground on which you stand. Catch the ball, as that will prevent the opposing team from scoring a touchdown. Learn to throw curve balls that will just clear the rope and be difficult to catch."

An Overburdened Wife

If the work that women do and the pains they suffer could be measured in figures, what a terrible array they would present! Through girlhood, wifehood and motherhood woman toils on, often suffering with backache, pains in side, headaches and nervousness which are tell-tale symptoms of organic derangements which Lydia E. Pinkham's Vegetable Compound—made from roots and herbs—can undoubtedly correct. Women who suffer should not give up hope until they have given it a trial.

The Climbers.

After reaching the pinnacle of fame many a climber has found it an uncomfortable roost.—Atlanta Journal.

"What does Jinx remind you of?" "He most always reminds me of \$10 I owe him."—Houston Post.

Just Starting.

Mother—Why, Lola, aren't you asleep yet? Little Lola—Not quite, mamma, but one of my feet is.—Chicago News.

Republican Want Ads. Pay.

The KITCHEN CUPBOARD

CREAMED CODFISH.

CREAMED fish is a palatable dish when the usual meats have grown tiresome, says an authority on cooking. With it corn muffins are particularly good, while a potato and endive salad is appetizing.

Cod and Creamed Sauce.—Take two tablespoonfuls of breadcrumbs, one-fourth teaspoonful of chopped parsley, salt and pepper, one-half a lemon rind grated fine, one egg and one ounce of butter. Mix breadcrumbs, parsley and seasoning on the plate. Remove skin from the fish and wash in salt and water. Dry well on a clean cloth, brush it with beaten egg and roll in the mixture. Place in baking pan and bake for about half an hour.

When Fish is Left Over.

Creamed Codfish and Potato Sandwich.—Take cold mashed potatoes and whip them until light. Put half of the potato into a shallow baking dish, brush with melted butter, spread over it cold creamed codfish, add the remainder of the potatoes, brush with melted butter and place in a brick oven for ten minutes. Both mashed potatoes and creamed codfish are leftovers.

Creamed Codfish on Toast.—Take a cupful each of salt codfish and milk, a tablespoonful each of butter and flour, a dash of paprika and a half teaspoonful of grated onion. Soak the codfish overnight. In the morning pour off the water and cover with cold water. Put it on the stove and bring to the boiling point; then pick into small pieces, mix with the sauce and serve on toast. To make the sauce put the butter and onion into a saucepan, add flour, mix well, add the cold milk slowly, stirring until smooth and creamy, boil three minutes. Dust the creamed codfish with paprika.

Served In Delicious Sauce.

Creamed Codfish With Eggs.—Take two cupfuls each of flaked codfish and milk, two tablespoonfuls of flour, two tablespoonfuls of butter, salt and pepper to taste, three hard boiled eggs, a tablespoonful of minced parsley. Boil the codfish till tender; then reheat in a white sauce made of the other ingredients. Chop the eggs coarsely, add to mixture, sprinkle in the parsley and serve either in a border of mashed potatoes or on toast.

Ana Thompson.

Best Family Laxative.

Beware of constipation. Use Dr. King's New Life Pills and keep well. Mrs. Charles E. Smith, of West Fanklin, Me., calls them "Our family laxative." Nothing better for adults or aged. Get them today, 25c. Recommended by H. H. Carter Drug Co., Seymour, Ind.

MANY KILLED IN JAPANESE QUAKE

Appalling Disaster On Island of Nippon.

CITY OF AKITA IS DESTROYED

Suddenness of the Earthquake Which Shook Buildings in Populous City From Their Foundations Prevented Escape of Many Who Were Caught in the Ruins and Crushed to Death There and in Neighboring Village.

Tokio, March 16.—In the prefecture of Akita, on the island of Nippon, about 300 miles northward of Tokio, there was a severe earthquake Sunday. Many persons were killed in the city of Akita and many houses were destroyed or damaged. There were many casualties in the village of Kowakubiki, which was ruined. The volcano Asama-Yama, ninety miles northwest of Tokio, is in eruption.

The city of Akita is the capital of the province of Ugo. It had a population at the last census of 37,000. It is but five miles from the Japan Sea and its port is Teuchizaki. It stands on the right bank of the Toshiwa Gawa and manufactures silk on a large scale. In the environs there are fine peach, pear and apple orchards. A long dynasty of fighting Daimyos dwelt there until the restoration at which time the now ruined castle was held by Lord Satake. The fine garden in the old castle has been converted into a lovely retreat which is known for its splendid cheery trees.

The island of Nippon is the most populous one in Japan, containing 35,000,000 of the total population of 49,000,000.

This city was shaken slightly by the quake. On account of the damage to telegraph lines and railroads, communication with the stricken district was cut off almost entirely, and only vague details have been received here. It is feared, however, that there has been an appalling loss of life. It may be several days before the full extent of the disaster is known.

Asama-Yama is the largest active volcano in Japan. A majority of its active periods have been productive of showers of ashes only, although an American was killed on the side of the mountain several years ago when the volcano became active. Its last great eruption was in 1783, when several villages on the north side of the mountain were obliterated by huge streams of lava. The crater is about three-quarters of a mile in circumference.

The last word from the stricken zone that was received here said that survivors in cities and towns in the quake zone are fleeing to the mountains for refuge, and that the trembling earth threw thousands into a panic, which was increased by memory of the recent disastrous quake in Japan which cost hundreds of lives.

A FIGHT FOR FREE TOLLS

Exemption Clause Favored by Rivers and Harbors Congress.

Washington, March 16.—The national rivers and harbors congress, which has branches in many states, has thrown its influence against the recommendation of the president for the repeal of the free toll provision of the Panama canal act. In a formal statement issued by Senator Ransdell of Louisiana, president of the congress, and S. A. Thompson, secretary, an appeal is made to all of its members and to all commercial organizations, asking that they "flood" their members of congress and senators with protests against the repeal of the exemption clause.

Taggart Case Again Postponed.

Nashville, Ind., March 16.—The trial of Frank P. Taggart, recorder of Brown county, and his wife, Ella Taggart, on charges of murdering their twelve-year-old niece, Norma Taggart, who died suddenly at the recorder's home April 12, 1913, has again been continued on account of the illness of Mrs. Taggart. The indictments charge that they killed the girl by ill-treatment.

Hoosier Dashes Into Car.

Cincinnati, March 16.—Wilber Brewer, twenty-three years old, a school teacher of Franklin, Ind., was instantly killed when he ran into a traction car near a sanitarium in College Hill, where he had been a patient. He was walking with an attendant. Suddenly he ran directly into the car and was crushed to death.

More Trouble Near Tampico.

Vera Cruz, March 16.—The local military officials report a heavy engagement outside Tampico and say the rebels are apparently forming for a general attack. The Red Cross surgeons and nurses are preparing to sail for Tampico.

Victim of Runaway.

Washington, March 16.—Jason Brown, fifty-five years old, father of seven children, was killed instantly in jumping from a buggy while his horse was running away. His head struck a rear axle and his neck was broken.

VINCENZO PERUGIA

Man Who Stole the "Mona Lisa" Portrait Is Likely to Go Free.

Florence, Italy, March 16.—The trial of Vincenzo Perugia, who stole the Mona Lisa from the Louvre in Paris and who was arrested here on Dec. 1 last, when the picture was found in his house, which was fixed for March 31, has been indefinitely postponed in order to enable an alienist to examine into Perugia's sanity. This is probably a prelude to the man's release.

WANTS PRESIDENT TO GO EASY WITH THEM

Friends of the New Haven Seek Better Terms.

Washington, March 16.—Friends of the New Haven railroad are making some determined efforts to influence President Wilson and other officials of the administration toward the view that Attorney General McReynolds' demands have been unnecessarily radical in the negotiations looking to the adoption of a reorganization plan. By these efforts friends of the road hope to convince the president that political expediency demands that he intervene in the negotiations in order to moderate in some measure the conditions laid down under which the road may escape a suit under the Sherman act.

Unless the president is influenced by consideration of the New Haven's case bearing upon the general industrial situation into intervening against the attorney general's manner of conducting the case, there is a strong likelihood that he will refuse to ameliorate in any particular the demands which he has made against the road. The attorney general already has had prepared a suit in equity demanding the carrying out by court decree of every phase of the reorganization plan which he has urged in negotiations with President Elliott. It is understood also that the preparation of criminal suits against persons responsible for the creation of the present alleged monopoly in New England transportation also has gone far enough to make it possible for them to be filed in a comparatively short time.

The attorney general's mood is such that he probably will not tolerate any considerable delay by the road in accepting or rejecting the terms he has laid down for an agreement.

TERSE TELEGRAMS

The Mexican government reports that everything is quiet at Mazatlan, Monterey, Guaymas and Tampico.

Sumitaka Haseba, president of the Japanese house of representatives, died suddenly Sunday of heart disease.

The Kentucky house of representatives voted 51 to 29, against an amendment to the state constitution allowing women to vote.

Vice Admiral Tauraturo Matsuo has been arrested on charges connected with the recent expose of grafting in Japanese naval contracts.

Villa has canceled all trains between Juarez and Chihuahua pending the battle at Torreón, as all trains will be needed south of Chihuahua for transporting rebel troops.

Marconi is making experiments with a new aeroplane apparatus and has maintained communication from the shore at forty-five miles unbrokenly for twelve hours with a vessel at sea.

Suffragettes desecrated the cathedral at Birmingham and caused considerable damage to a famous window, besides daubing suffragette phrases in white paint all over the interior of the building.

Colonel Francis Edward Younghusband of the British army, the first white man to lead a military force into the sacred city of Lhasa, Tibet, has arrived at New York to make a tour of the United States.

A suffrage holiday is what the congressional committee of the National Suffrage association has requested of the governors of the different states in order that all women may participate in the great demonstration on May 2.

PUBLICITY THE BANE OF TRUSTS

The Theory On Which This Bill Is Based.

A COMMERCE COMMISSION

Following the Recommendations Contained in President Wilson's Recent Anti-Trust Message, a Committee of the House Has Prepared and Introduced a Bill for Government Espionage on Big Corporations.

Washington, March 16.—Proposing the creation of an interstate trade commission, the administration bill was introduced in the house today. The bill provides for the creation of a trade commission of three members, one of which must be of the opposite political party to his colleagues. The bill was drawn on suggestions made by the president in his address to Congress last January when he discussed trusts and monopolies. The president at that time recommended a trade commission, "as an instrument of obtaining information and publicity, and as a clearing house for the facts by which both the public and the managers of great business undertakings should be guided."

President Wilson also recommended that the commission be made capable of assisting the courts in the shaping of corrective processes. The president believes in the preservation of proper competitive conditions and for this reason does not desire the commission to have power of regulating or controlling prices or any authority of direct control over the lawful operations of industrial business. In framing this bill this idea has been carried out. Because of the failure of the bill to authorize the commission to fix prices and otherwise regulate the practice of interstate corporations it probably will be opposed by Progressive members.

Under section 9 of the bill all corporations engaged in interstate commerce and having a capital of more than \$5,000,000 are required to file annual reports giving complete statistical details of organization, stockholders, financial conditions and general business conduct. The commission also has power to make classifications of corporations having a capital of less than \$5,000,000 which shall be required to make the same annual reports as are submitted by the large corporations.

"This power of classification," Representative Covington, chairman of the committee, said, "will relieve the mass of smaller business concerns engaged in interstate commerce from the necessity of making such reports, while it reserves to the commission that discretion which it ought to have to provide for national publicity in aid of disclosing bad practices in interstate commerce without regard to the size of the corporation engaging in those practices."

The commission also will be authorized by direction of the president, the attorney general or either house of congress to investigate and report the facts relative to any alleged violation of the anti-trust law and it may include in its report recommendations for the readjustment of business so that competitive conditions may be restored, and the corporation investigated may operate lawfully.

PETITION IN BANKRUPTCY

In the Case of the Henry Siegel Bank Has Been Withheld.

New York, March 16.—A new hope, of slight proportions, is held out for the depositors in the private bank of Henry Siegel & Co., and as a result the petition in bankruptcy against the bank and the other Siegel enterprises which was to have been filed today has been withheld.

An offer by the mercantile creditors to pay the bank depositors \$200,000 in cash, has caused the attorneys for the depositors to agree to keep the petition back for a few days until the new proposition can be considered by all the depositors.

With the \$200,000 from the mercantile creditors, \$100,000 from the fidelity and Guarantee company, and \$25,000 which the bank receiver has in cash, the bank depositors would get about 12 per cent of their deposits.

Court Dismisses Roach Case.

Terre Haute, Ind., March 16.—The charge against Joseph Roach, special prosecutor in the election fraud cases, of carrying concealed weapons was dismissed by Justice Joseph Scott. Roach was arrested when he sought to prevent alleged illegal voting at a primary polling place. His defense was that he was acting within the law when he attempted to prevent stuffing of the ballot box.

Dorothy Arnold Story Exploded.

Los Angeles, March 16.—The young woman who claimed to be Dorothy Arnold has been identified as Emily O'Dell, recently released after being accused of passing bogus checks. She never has been in New York.

Fires within eight hours destroyed 500 tons of broom corn in Charleston and Mattoon, Ill., and caused damage which will aggregate \$125,000.

FACING DIVORCE

Swedish Princess in Trouble With Her Husband, and Son.

A CHARGE OF DESERTION

Swedish Princess, Cousin of the Czar of Russia, Facing a Divorce.

Stockholm, Sweden, March 16.—The Grand Duchess Pavlovna of Russia, wife of Prince William of Sweden, second son of King Gustave V., has been summoned through the Swedish legation in St. Petersburg to appear in the court of assizes at Stockholm. She will there have to answer a charge of having deserted her husband. Divorce proceedings between the royal couple have been in progress for some time.

Prince William, who is now on a hunting expedition in Uganda, is not expected to return to Sweden before the end of April. The grand duchess has been in St. Petersburg for some time. She is a daughter of the Grand Duke Paul Alexandrovitch and a cousin of the emperor of Russia. She is now in her twenty-fourth year. Her husband is in his thirtieth year. They have one son.

TERRE HAUTE STREET CAR STRIKE NOW ON

Cars Wrecked After Men Abandon Them.

Terre Haute, Ind., March 16.—A strike of union streetcar employees was followed by street trouble which the police were powerless to stop. Conductors and motormen were pulled from the cars. After breaking the windows out of a dozen cars which were stalled in the business section, the crowd moved to the traction terminal station.

The plate glass windows were wrecked by clubs and paving blocks torn from the streets. The leaders of the crowd then entered the building and damaged the interior. Streetcar service was abandoned. Boys in their teens and young men did most of the damage.

The Governor Made Inquiries.

Indianapolis, March 16.—Governor Ralston was in communication with officials of the city of Terre Haute, the Vigo county sheriff's office and with the general manager of the street railway company there, and he informed them that the state would expect the city and county officials to maintain order there in the streetcar strike. The governor said that unless the local authorities maintain order the state will do so. Everyone with whom he talked told him he believed the local authorities could cope with the situation without assistance from the state. There has been no request that the governor send troops.

Will Appoint Arbitrators.

Indianapolis, March 16.—The public service commission announces that it has decided to appoint a board of arbitration to settle all differences which may arise between the Indianapolis Traction and Terminal company and its employees at any time in the next three years, or the life of the award which the commission made recently concerning wages and conditions of labor.

CANDIDATES ON GROUND EARLY

Preparations for Democratic State Convention.

KERN TO BE THE KEYNOTER

Party Leaders Practically Have Decided That Junior Senator Shall Be Made Chairman of Next Thursday's Gathering of Indiana Democracy—Senator Shively to Be Heard Following His Nomination For Re-Election.

Washington, March 16.—Senator Kern will leave for Indianapolis tomorrow evening. Senator Shively will start at 6:15 o'clock this evening, arriving at Indianapolis about noon Tuesday. After the state convention Senator Shively will make a hurried trip to Bloomington before returning to Washington. He is chairman of the board of trustees of the state university.

Indianapolis, March 16.—Senator John W. Kern probably will be chosen permanent chairman of the Democratic state convention next Thursday. Leaders of the party assert that if Senator Kern arrives in time to preside it is not likely that anyone else will be considered for the place.

The committee on rules and permanent organization of the convention will be elected Wednesday night. The sentiment favors Senator Kern for permanent chairman. Chairman Korbly of the state committee says that all of the members of congress who attend the convention will have opportunity to be heard.

Chairman Korbly has had boxes reserved at the convention for Senators Kern and Shively and their families and also for Vice President and Mrs. Marshall. It is understood, however, that the Marshalls will be unable to come. Senator Shively, it was stated, will attend the convention and will speak following his nomination for the senate.

Many of the candidates and an active following of their friends already are on the ground preparing to have their several headquarters in good running order by the time the delegates arrive on the scene Wednesday.

MANY PROMINENT SPEAKERS

Will Address Coming Meeting of Indiana Teachers.

Indianapolis, March 16.—Prominent educators and lecturers from all over the middle west will be in Indianapolis to attend the annual convention of the Southern Indiana Teachers' association, which will open Thursday, March 26, and continue for three days.

The principal address of the opening day will be delivered by Henry Churchill King, president of Oberlin college. Dr. Albert Shaw, editor of the Review of Reviews, will speak the second day of the convention. His subject has not been announced. Dr. Edwin Doak Mead, secretary of the World's Peace Foundation, will speak on the second day of the convention.

A feature of the Saturday morning meeting will be the address of J. A. Burns, president of Oneida college of Oneida, Ky. Other men of national prominence who will speak are: Dr. William Lowe Bryan, president of Indiana university; Dr. Charles P. Emerson, dean of the Indiana university school of medicine; Dr. E. J. Ward of Wisconsin university; Miss S. B. Rutherford, supervising principal of Louisville, Ky., and Osbourne McCone, head of the department of public school music of Northwestern university.

Church Trial Ended.

Martinsville, Ind., March 16.—The trial of the Rev. John R. Ellis, former pastor of the First Presbyterian church of Bloomington, has ended. The sessions were held by a special commission of the Indianapolis Presbytery, to determine whether the minister should be expelled from the presbytery. The commission will reconvene in Indianapolis next Saturday morning to render its verdict.

Relatives Fear Foul Play.

Columbus, Ind., March 16.—Search is being made for Jacob Campbell, a veteran of the civil war and farmer, who started Friday morning on foot from his home to Elizabethtown, a distance of ten miles, to consult a physician. He has not returned and his relatives fear he has died or met with foul play.

Governor Paroles Lawyer.

Indianapolis, March 16.—Governor Ralston has paroled Oliver E. Harlan, a former Indianapolis attorney, from the state prison, to which he was committed Feb. 11, 1913, for having embezzled \$700 from a client. Harlan has arranged to pay the money he embezzled and has resigned from the bar in all the courts of the state.

Auto Wrecked by Fire Truck.

Fort Wayne, Ind., March 16.—Captain Ferd Schroeder of the city fire department was seriously hurt and four other men escaped with lesser injuries when a hose wagon, in making a run to a fire, collided with an automobile driven by Bert Simcoe. The automobile was completely wrecked.

PRINCE WILLIAM.

Second Son of King of Sweden May Be Divorced.

Photo by American Press Association.

CARRANZA FINALLY CHANGES HIS TUNE

Realizes His Attitude Toward Us Was Wrong.

San Diego, Cal., March 16.—The United States customs office and post-office at Tecate were burned and the postmaster, Frank V. Johnston, was shot dead by three bandits. Observers of the tragedy say the bandits were Mexicans.

Washington, March 16.—Interviews had with Mexican "Constitutionalist" agents here confirm the previous indications that the leaders of the rebel cause expect the utmost harmony to prevail in the relations between their organization and the government of the United States as a result of Carranza's latest note. In this note Carranza expressed a willingness to receive representations from United States consuls in behalf of the citizens of other governments in Mexico.

It is declared by those known to be direct representatives of Carranza that on the occasion of the next representations which the state department may have occasion to make on behalf of foreigners in northern Mexico, it will be found that the procedure laid down by Carranza will interpose no difficulties to the wishes of the United States either in form or substance. A simple statement in the consular instructions to the effect that such representations are made at the request of this or that government will be all that is necessary to satisfy the rebel chieftain, his advisers here state, and it is not anticipated that there will be in the future the slightest difficulty over the United States acting for foreign governments in northern Mexico.

A NOOSE AROUND HIS NECK

How an American in Mexico Was Encouraged to Contribute.

Mexico City, March 16.—Rodrigo Quevedo, who escaped from Fort Bliss after the flight there of the federalists from Ojinaga, organized a federal guerrilla force of 700 men comprising other fugitives, and took Casas Grandes from the rebels, who retreated toward the Mormon colonies. He reports that the rebels captured an American named J. L. Taylor, from whom they demanded a ransom of 1,000 pesos. Taylor said he did not have a sufficient amount to pay the ransom, whereupon he was taken out and a noose placed around his neck. Taylor then offered all he had, amounting to 500 pesos, whereupon he was released.

The rebel leader Solis is said to be mistreating many Americans and compelling them to contribute to the rebel treasury.

Suicide of a Farmer.

Boonville, Ind., March 16.—Robert Simpson, prominent Warrick county farmer, committed suicide by firing a shotgun charge into his abdomen. The cause of the shooting is not known.

Twenty-Nine Bodies Recovered.

St. Louis, March 16.—Three bodies were removed from the ruins of the Missouri Athletic club fire Sunday, bringing the total of dead recovered to twenty-nine.

The International Cold Storage association has collected \$22,000 for the benefit of the invalid son of Tellier, inventor of the cold storage process now in use all over the world, who died of starvation last October at the age of eighty-five.

France has taken up baseball with no less enthusiasm than she adopted the sport of boxing.

PROMINENT EDUCATORS TO SPEAK AT CONVENTION
Annual Convention of Southern Indiana Teachers' Association at Indianapolis, March 26-28.

Indianapolis, March 16.—Prominent educators and lecturers from all over the middle West will be in Indianapolis to attend the annual convention of the Southern Indiana Teachers' Association, which will open Thursday, March 26, and continue for three days. It is estimated that more than 5,000 persons will be here for the meeting.
The principal address of the opening day will be delivered by Henry Churchill King, president of Oberlin College. Mr. King is one of the most widely known educators in the United States. He has gained recognition as being one of the most forcible speakers on the American platform. He will talk on "The Reverence for Personality."
Dr. Albert Shaw, editor of the Review of Reviews, will speak the second day of the convention. His subject has not been announced.
Dr. Edwin Doak Mead, author, lecturer and secretary of the World's Peace Foundation, will speak on "The United States as a World." His address will be delivered the afternoon of the second day of the convention.
A feature of the Saturday morning meeting will be the address of J. A. Burns, president of Oneida College of Oneida, Ky. His subject will be "The Feudists and Moonshiners of the Cumberlands." Mr. Burns is one of the most picturesque figures in the educational world. With all the ardor of a prophet of old he is giving his life that 500,000 untrained Americans may have a chance to educate themselves. He has been termed "a man as elemental as the folk for whom he strives." His address is expected to be one of the most interesting of the convention.
Other men of national prominence who will speak are: Dr. William Lowe Bryan, president of Indiana University; Dr. Charles P. Emerson, dean of the Indiana University School of Medicine; Dr. E. J. Ward of Wisconsin University; Dr. E. H. Lindley, Indiana University; Miss S. B. Rutherford, supervising principal of Louisville, Ky., and Osbourne McConathy, head of the department of public school music of Northwestern University.
The sessions will be divided between the Claypool Hotel and Tomlinson Hall. All of the larger meetings will be held in Tomlinson Hall.
The convention sessions will be held as follows:
General Association—Thursday evening, 8 o'clock, Tomlinson Hall; Friday afternoon, 2 o'clock, Tomlinson Hall; Friday evening, 8 o'clock, Tomlinson Hall; Saturday morning, 9 o'clock, Claypool Hotel.
Sections—High school, Friday morning, 9:30 o'clock, Shortridge High School, grammar grade, Friday morning, 9:30 o'clock, Claypool Hotel; primary, Friday morning, 10 o'clock, Y. M. C. A. auditorium; kindergarten, Friday morning, 10 o'clock Teachers' College, Alabama and Twenty-third streets; music, Friday morning, 10 o'clock, Claypool Hotel.

LIQUOR ELEMENT MAKES HARD FIGHT
Fifth Important Battle in Indiana
This Year to be Held at Richmond, March 24th.
FIFTY-FIVE SALOONS INVOLVED

Temperance Forces Have Won Four Contests and Lost One in State Since January 1st.

Indianapolis, Ind., March 16.—Liquor fights to date this year have involved 55 saloons. The fight in Richmond alone, leading to the election on March 24, involved 55 saloons. For this reason, and because real leaders of both forces have gathered in Richmond, the fight there appears about to eclipse the fight in Muncie, where only 29 saloons were involved.
The following in the situation in Indiana as the result of recent option campaigns:
The dries have put 39 saloons out of business this year.
The wets have retained 16 debated saloons.
In the Richmond fight alone 55 saloons are in question.
Connersville has voted for saloons. Greensburg, Bloomington, Lyons and Muncie have ousted saloons.
The dries are planning to start a fight in Peru, having 17 saloons.
With a victory in Peru they would try Logansport, with 59 saloons.
Richmond's election comes March 24th.
S. E. Nicholson, author of the Nicholson law, regulating saloons, is conducting the campaign of publicity in Richmond. Opposed to him is J. Bennett Gordon, former editor of the Richmond Item, who has a reputation second to none as a fighter. Both men are acquainted with every phase of the issue as it pertains to Richmond.
To Gordon is entrusted the brunt of the fight for the wets, but Nicholson is ably assisted by President Robert L. Kelley of Earlham college, Professor Elbert Russell of the college and Richmond ministers. One of the Richmond newspapers has openly espoused the dry cause, while the other is remaining neutral.
While the Muncie wets had the advantage of a mayor actively aiding them, Mayor Robbins, of Richmond, is neutral. In several respects conditions in Richmond are very similar to those in Muncie. Each city has been the scene of a remarkable revival in which thousands have been affected. The revival in Muncie is given credit for much of the showing made by the dries. Each city in the past few years has given the wets a good majority in a liquor fight. Two years ago Muncie went wet by a majority of 507, and five years ago Richmond gave a handsome majority to the wets. It remains to be seen whether Richmond will follow Muncie further. In each city the saloons have been well regulated in the past few years.
Two well defined arguments are being used in Richmond. The dries advertise the following:
Vote Dry and Boom Richmond. Not Hysteria but Facts.
The wets have adopted the following slogan:
Which Shall it Be?—Regulated Saloons; or Bling Tigers and Whiskey Drug Stores?
The dries assert that there is a significance to this struggle—that if Richmond goes dry following Muncie—it will mean a Waterloo for the wets, and they assert that the presence of such a variety of liquor interests in Richmond and Muncie for these fights testify that the wets realize this.
"It will be a good, stiff fight, said E. S. Shumaker, secretary of the state Anti-Saloon League to the United Press today. The same elements figured in Muncie are now in Richmond. It appears that the dries have a splendid chance to wipe out the defeat of five years ago. Thousands of dollars are being dumped onto Richmond by the wets. If Richmond goes dry it will mean much for the state. We are using the brewers' law to whip them. They downed county option, and substituted city option, but we are whipping them at their own game. The result in Richmond will be close."
One other feature that has fixed the attention of the state on Richmond in this fight is the stand made by B. B. Johnson, secretary to Governor Ralston, and a native of Richmond. He not only has stated that he will vote dry, reversing a stand of former years, but he has presided at dry mass meetings, accepting an invitation refused by Mayor Robbins of Richmond.
U. S. NEGLIGENT IN NOT RECLAIMING SWAMP LANDS
John A. Lapp Estimates That Annual Loss From This Source is \$1,000,000 in Indiana.
By United Press.
Indianapolis, March 16.—John A. Lapp declares that the United States has been guilty of criminal neglect, in that it has not reclaimed its swamp land. He declares that the annual loss to Indiana alone for this reason is admittedly \$1,000,000. The bureau of legislative information, of which he is director, is about to issue a bulletin on drainage, prepared after long research by Charles Kettleborough of the department. Lapp writes the following today:
Considered purely as an economic question, as well as in its vital relation to the public health, drainage is a subject of paramount importance, involving a manifest public duty in the discharge of which, because of our imperfect and inadequate comprehension, we have been guilty of criminal neglect. There are 80,000,000 acres of unproductive swamp lands in the United States, a territory equal in extent to the combined area of Illinois, Indiana, Maine and Ohio, which is susceptible of profitable and permanent redemption.
In addition there are 150,000,000 acres of arable land which do not produce within 20 per cent, as much as they should because of insufficient drainage. These unprofitable, disease-breeding swamps, distributed over the entire national domain from the Atlantic to the Rockies and from the Lakes to the Gulf, constitute a national liability of several billions of dollars. This incredible economic loss should be added an annual waste of \$165,000,000 through the deaths, disability and loss of earning power due to malaria germs which flourish unchecked in these uncultivated areas.
Three states have approached this subject in a comprehensive, scientific and determined manner, and have already achieved results which have more than justified the predictions of the most sanguine advocates. Texas has added an average value of \$25.00 to each acre of swamp lands within her spacious domain; Missouri has added \$90,000,000 to the assessable value of her property within the brief space of 20 years; and it is confidently predicted that the redemption of the waste lands in Illinois will add \$100,000,000 to the wealth of that state. During something more than a century, Indiana has reduced her swamp-land area by 2,500,000 acres and has added \$68,000,000 to her assessable wealth. But even as late as 1910 the United States census reports disclosed that upwards to 1,000,000 acres were still unreclaimed, unproductive or only in a partial and uncertain state of cultivation. The annual loss to the state by reason of the existence of these waste and unproductive lands is admittedly \$1,000,000. Surely the solution of this question by the extinction of the indefensible economic waste and the annexation of this extensive domain to our taxpaying assets should stimulate the imaginations and enlist the attention of constructive statesmen.

FURBELOWS AND FLOUNCES
Fashion decrees the returning to favor of the separate skirt and the making of the skirt a thing of furbelows, frills and flounces.
The stores—those "fashion indicators"—are already showing the new style notes and telling about them in their advertisements.
It used to be that the news columns of the newspapers made the fashion announcements first; but nowadays the stores are so alert and so anxious to be first in these announcements that much of the latest fashion news is in the advertising columns.
Any person who wishes to keep up to the minute on the new fashions must be a reader of the advertising in live newspapers like THE REPUBLICAN.
The advertising columns are the mirrors that reflect the attractions of the merchants and manufacturers. These men live by service.
They must make their advertising timely and interesting just as they make their merchandise desirable and fair in price.
The news of the frills and furbelows is only one side of advertising.
Read the advertising and keep informed.

MONEY TAKES WINGS! LOOK! HERE'S THE WAY TO STOP IT!

A MAN will start downtown with \$50 in his pocket. On his way he will pass a bank. If he deposits \$40 of his \$50 he will be more sparing in his expenditures. Money will not TAKE WINGS! Little currency and a FAT CHECK BOOK is a better combination than an elephantine WAD OF GREENBACKS and an ANAEMIC CHECK BOOK!

THE-HUB

PERSONAL.

Walter Bidwell spent Sunday with friends in Louisville.

Mrs. O. D. Schooley was here from Vallonia this morning.

O. E. Foster, of Newry, was in the city today on business.

Frank Bush went to Jeffersonville this morning on business.

Miss Gertrude Meyers visited her sister in Louisville Sunday.

George Craig, of Louisville, was in the city Sunday on business.

Charles D. Hardin spent Sunday with his parents near Columbus.

W. B. Gallimore made a business trip to North Vernon this morning.

Mrs. B. F. McConnell, of Seipio, spent Saturday here with relatives.

Mrs. Agnes Dennison is home from an extended visit with friends in Milan.

Mr. and Mrs. S. H. Amick are at home from a visit with relatives in Seipio.

Mrs. Harry French was called here today on account of the death of her nephew.

Mrs. Lou Cox of Chestnut Ridge, spent Sunday with Mr. and Mrs. John Cox.

Mrs. J. O. Staples, of North Vernon, spent Sunday the guest of Mrs. Frank Bush.

Miss Anna Rucker, who teaches in the high school at Medora, spent Sunday at home.

W. G. Reynolds, of Indianapolis, spent Sunday here with Mrs. Reynolds and daughter.

George Zollman was here from Medora Saturday to attend the sale at Hopenell's Barns.

Frances Gates, of Terre Haute, spent Sunday with his parents, Mr. and Mrs. F. H. Gates.

Miss Lucile Morarity and Mrs. C. E. Smith and son went to Mitchell Sunday to spend a few days.

Miss Martha Keach, of Crothersville, spent Sunday here the guest of Mr. and Mrs. Ray R. Keach.

Mr. and Mrs. Joseph Stein went to Cincinnati Sunday morning to visit his mother who is quite sick.

Misses Ethel and Naomi Smith went to Indianapolis Sunday to spend a few days with relatives.

Mrs. Elgin Marsh came from Mitchell this morning to visit her parents, Mr. and Mrs. H. T. Bennett.

Mrs. Casper Beal and daughter, Miss Agnes, and Joe Beal, of Columbus, spent Sunday here with relatives.

William E. Springer, of Elizabethtown, was here Saturday to attend the horse and mule sale at the Hope-well Barns.

Miss Julia Kerkhof went to Indianapolis Saturday to visit over Sunday with her parents, Mr. and Mrs. Frank Kerkhof.

Mr. and Mrs. Peter Sensback went to Four Corners this morning to attend the funeral of her mother, Mrs. Josephine Haag.

Miss Harriet B. Blossom, of Greenville, O., came Saturday to begin her duties as trimmer for Miss Minnie Husted.

Mrs. Frank Roemmel and Mrs. Herman Bartlett and daughter returned this morning from a visit with relatives in Medora.

Mrs. R. E. Sanders left this morning for her home in Racine, Wis., after a month's visit with her sister, Mrs. Adelia White.

Judge O. H. Montgomery, E. P. Elsner, S. A. Barnes and Judge Swails went to Brownstown this morning to attend court.

Mrs. Henry Kattman of Brownstown, was here this morning on her way to Crothersville on account of the illness of her mother.

James Rumbley of Brazil, returned this morning after spending Sunday here with his parents, Mr. and Mrs. William Rumbley.

Mrs. William Hyland and Misses Laura Kasting and Lavina Meyers went to Indianapolis this morning to attend the spring openings.

Thomas Kreinhagen, ticket agent for the B. & O. S.W., left this morning for Coffeyville, Kas. on account of the serious illness of his sister.

SLIM JIM AGAIN ESCAPES FROM GRASSVILLE POLICE

After Disappearance of Two Weeks
He Shows Up For More Big
Doins.

Slim Jim, the renowned Nemesis of the Grassville police Force, is again at large and wishes to inform one and all that he thinks it will be a hot day at the North Pole before he is again captured.

Two weeks ago the Grassville Force surprised him while asleep, placed him in irons in the Grassville calaboose and he there spent a two weeks' sojourn on nothing but bread and water. This you see explains his mysterious and entire disappearance from our Funny Part for the past two weeks.

He is naturally very much peeved at such treatment and promises to furnish you more excitement and fun in his future spectacular stunts than ever before.

In other words (calm and collected as he usually is,) slim's dander is up to the boiling point and there's going to be the biggest doings ever from now on.

You'll see him in the next Funny Part—Watch for it.

Successful Revival.

The following is taken from the Western Christian Advocate and tells of the successful revival recently held by Rev. H. H. Allen, pastor of the M. E. church at Aurora. He was formerly pastor of the local First M. E. church.

Hayden H. Allen, pastor, has just closed five weeks of special services. One hundred and twenty-seven bowed at the altar and professed conversion, and 104 united with the church. The pastor was his own evangelist, and the choir and congregation did the singing. The older people say it was the greatest revival in the history of the city for years. The Sunday School has increased, since Conference, from 150 to more than 300. There has been a great awakening among men. A few months ago there were just a few men in the Sunday School; on February 22nd the Brotherhood Class had seventy-four present. They expect to have 200 in attendance by Easter. The ladies have organized a Bible class, and they had thirty present February 22nd. The outlook for a successful year is good.

C. S. Mercer was in Indianapolis today on business.

FARM-ORCHARD AND GARDEN

BY **F.ETRIGG**

REGISTER, ROCKFORD, ILL.

CORRESPONDENCE SOLICITED

[This matter must not be reprinted without special permission.]

Nineteen hundred and thirteen was the banner year in the history of coal production in the United States, the output being about 570,000,000 short tons.

There is one advantage in growing horseradish, and that is that it is so stout and pungent in odor and taste that most insects give it a mighty wide berth.

Roughly, skim milk gives a return of 40 cents a hundred pounds if fed to pigs, 60 cents if fed to calves and \$1 per hundred if fed to poultry. There ought to be a hint here for poultry raisers.

The yield of buckwheat in this country the past season was the smallest yield in thirteen years, due chiefly to summer drought and early frosts in New York and Pennsylvania, the two states that produce most of the crop.

The great opera singer Mne. Melba has a thousand acre ranch near the city of Melbourne, Australia, and on this keeps 150 pure bred Holstein cows. On retiring from her active professional work she intends to enter the dairy business more extensively.

The foliage plants will grow more thriftily and have a better color if they are placed in a window where they will get some sunshine. On the other hand, the several varieties of ferns thrive best in north windows or other places where they do not get direct sunshine.

Several of the common wild plants, including wild lettuce, dandelion, milkweed and others, have been found by chemical analysis to contain considerable amounts of good rubber. How to extract this element in commercial amounts and without too great cost is a problem that has not yet been solved.

One writer on agricultural topics observed a short time ago that the man who loafs in the country store while his wife is at home splitting wood ought to be fed on cold sauerkraut and head cheese. It will strike a good many that head cheese is too toothsome a dish to feed such a shirk as this, and there will be many who will resent the implied insinuation touching the sauerkraut.

A good deal of argument has been presented of late against the use of the steel trap, and this was augmented the other day in a story which comes from Monrovia, Cal. A big trap that was set for a bear caught a pet dog whose mistress escaped it by but a few inches. The combined strength of two men was required to loosen the jaws so that the mangled paw could be released.

The other day there closed in Union township, Hancock county, O., a five weeks' rat hunt. Two hundred and thirteen men took part in the contest and produced 10,336 rat tails, the winners being given a dinner by the losers. The best killing in this campaign was made by a small rat terrier that had 2,000 tails to his credit, thirty of which he routed out of a single shock of corn.

Before any of our readers invest any of their hard earned coin in boom tracts anywhere in the country on the strength of raising hogs on cassava root at \$1.50 per hundredweight or fattening steers on cassava and spineless cactus leaves at \$1 per hundredweight they would do well to refer these figures to the department of agriculture at Washington for verification. These claims are so strong as to arouse suspicion as to their correctness.

Green food for the fowls in the winter months may be provided by sprouting grain. The grain should be soaked in water twenty-four hours, then drained. It should then be kept moist by sprinkling with warm water night and morning. When the grain starts to sprout it should be spread out to a depth of two inches. In two weeks the sod should be three or four inches thick and the growth of the green shoots six or seven inches high. It is then ready to feed and should be given in moderate quantities.

The folly of burning straw to get rid of it is realized when one knows what a ton of straw contains. Analysis shows that a ton of wheat straw contains 220 pounds of nitrogen, 80 pounds of phosphoric acid and 240 pounds of potash, while a ton of oat straw contains about 240 pounds of nitrogen, 80 pounds of phosphoric acid and 300 pounds of potash. The burning of straw means the destruction of most of the first two elements named; but, what is almost as vital, it means robbing the soil of the vegetable matter—humus—of which it is so much in need.

Some one has hit upon the plan of driving good sized nails into a barrel or short log about three inches apart and using this as a rack for drying seed corn. The butts of the ears are slipped on to the portion of the nails left projecting, such a rack being large enough to accommodate several hundred ears.

In no sphere is the truth of the statement "an ounce of prevention is worth a pound of cure" better shown than in the care of the health of domestic animals. It is well to apply remedies for diseases and disorders contracted, but it is far better to take the care and give the needed food and preventives which will keep the stock in perfect health.

A court of law is about the last place in the world a fellow should get into. This holds equally whether in the capacity of plaintiff or defendant. It is far better if one has a grievance against another to settle it outside of court, while it will be quite generally conceded that one should so conduct himself as not to appear in court in the capacity of defendant.

That student stock judging teams are getting the question of judging down to a point of considerable accuracy is shown in the score made by four teams competing at the recent Portland (Ore.) live stock show. The Idaho team ranked first with a total of 2,351½ points out of a possible 3,000; the Oregon team stood second with a score of 2,346 points; Washington, third with 2,331 points, while Utah stood fourth with 2,287 points.

The federal pure food investigators are looking into a trick that is being worked by a certain class of middlemen in the matter of starving live chickens and then stuffing them on a diet consisting of a little ground meal and a good deal of pulverized rock and sand. The chickens eat of this mixture greedily, and at the time they are sold to the economical housewife she pays from 20 to 25 cents a pound for from seven to eight ounces of this truck.

The department of agriculture has issued a most timely warning to potato growers along the line of exercising great caution in the use of secondhand foreign potato sacks, which are likely to contain the spores of a number of serious potato diseases. The sacks may be sterilized by heating with live steam for an hour or boiling for two or three hours in water. Unless secondhand sacks are guaranteed to be sterilized or one can do the sterilizing himself none but new sacks should be used.

Director Evans of the Missouri fruit experiment station at Mountain Grove, Mo., has succeeded after years of experimenting in crossing the Jonathan and Ben Davis apples. The reason for making the cross was not with the idea of getting a fruit that would be superior to the Jonathan, but a tree that would be able to withstand the cold winters which have visited the Ozark apple region in late years. The cross was effected by fertilizing the pistil of a Jonathan blossom with the pollen from a Ben Davis stamen.

What is said to be the first spineless cactus ranch of the southwest is soon to be established near El Paso, Tex. Seven hundred plants of the variety originated by Luther Burbank of California have been ordered. It is claimed that each plant will produce thirty-five stalks per year and that these leaves make excellent fodder for horses, cattle and hogs. The cactus flourishes on alkali soil and in the driest climate, and if it makes good in practical field tests it will be a great boon to vast areas at present practically desert in the great southwest.

The leaf roller, an insect that in its larval state is a small greenish worm and takes its name from the fact that it makes its nest by spinning a web on one side of a leaf and curling it, has been doing a good deal of damage in western orchards during the past two or three years. The worm not only devours the leaves of the trees, but eats holes in the small fruit. About the only methods of control are winter pruning, which removes many of the egg clusters, and spraying with a kerosene emulsion or black leaf solution shortly before the eggs hatch in early April.

The other day on a sunny knoll in the spacious grounds of the department of agriculture at Washington Secretary Houston presented diplomas of merit to eighty-two boys and girls, prize winners from an army of 200,000 of the brightest and most enterprising boys and girls in the United States in contests for the raising of bumper crops of corn, potatoes, tomatoes and poultry. It is worth recording the fact also that these same boys and girls had their car fare and other expenses paid from their homes to Washington and return, besides receiving valuable cash prizes.

A little seventeen-year-old miss of Cedar Falls, Ia., was the state's winner in the tomato growing contest and was one of the company of eighty or more bright boys and girls that were given a free trip to Washington. This girl succeeded in raising 3,400 pounds of tomatoes on 439 square yards of land. Her expenses for ground rent, work and equipment was \$25.25, while the fruit sold for \$118.14. This left a net profit of \$92.88. In view of such a showing as this on less than a tenth of an acre of land and made by an immature girl, there would seem to be mighty little excuse for any family in the land going hungry or lacking needed clothing and fuel during the winter months.

AGAINST ODDS.

There is an interval of a few months in the life of young feeding cattle immediately following the failure of pasture in the fall when they are likely not to do well. In a good many cases this is probably due to the fact that they do not take readily to the dry winter feeds and are often nosed away from the feeding racks and troughs by themselves and should be fed with reference to prevent this retarding of their growth referred to above. It is a good plan to re-enforce their rations of roughage and grain with a small allowance of oilmeal daily. This will give them needed protein, will keep the bowels in good order and will help to put them and keep them in a thrifty condition. Sometimes the untimely condition referred to is aggravated by lice and the bacterial disease known as scabies. Both these pests can be done away by spraying the animals with dips, or, better, giving them the tank treatment with some of the same stuff. A calf can't make much head way when it is short on protein on its insides and long on lice and scabs on its outside.

A PERPLEXING PROBLEM.

It is not surprising that the average farmer is a bit perplexed on the best methods to follow in regard to handling hog cholera. In several cases which have come under the writer's notice the following varied results have been noted: In one instance a hog raiser lost fourteen, gave the rest the serum treatment, and no more died. In another case fifteen died, and the remaining twenty-four did not contract the disease, although nothing was done to stop its progress. In still another instance a farmer had all of his hogs inoculated, some eighty or ninety, before the cholera appeared at all, but in a few days it broke out and took all of them. In a fourth instance a farmer took no further precaution than to give his hogs plenty of range and keep their quarters clean and sanitary, and to date he hasn't lost an animal, though there is no telling when he may be hit. The gist of the matter seems to be that the serum treatment is generally a satisfactory preventive of the disease when the serum is pure and when it is injected by a competent veterinarian. If these two conditions cannot be had it is probably better to let it alone.

A RAT EXTERMINATOR.

A man in Java has hit upon a new method of exterminating rats. After trying several plans without much success he hit upon the use of carbon bisulphide. First he stopped up all visible rat holes with earth to ascertain which holes were inhabited, for those that were inhabited he found reopened on the following morning. He then poured half a teaspoonful of the chemical into each one of the holes, and after waiting a few seconds for the liquid to evaporate the mixture of vapor and air was ignited. The small explosion which resulted filled the runways with poisonous gases and killed all the rats in a jiffy. In using this exterminator care should be exercised, as the chemical is of a very explosive character and its fumes are poisonous.

A SUGGESTION.

Here is an idea for some reader who has a stretch of river bottom land that is subject to overflow to such an extent as not to be fit for pasture and yet is too sandy to be fit for growing crops. The instance which gives the idea came under the writer's notice the other day in the shape of the record of the growth of a block of catalpa trees that were set out on a tract such as that described eight years ago. A sample cut was eight inches in diameter at the ground and was thirty-five feet high. The trees were straight and excellent for post timber and other uses. This tract, formerly considered worthless because it yielded no return, is today considered by its owner one of the most valuable tracts on his farm.

A VALUABLE DISCOVERY.

Bulletin 561, issued a short time ago by the federal department of agriculture, takes up the question of the growing of beans in considerable portions of eastern Washington, eastern Oregon and northern Idaho, where it has been the practice for years past to summer fallow the land alternate seasons. Experiments covering a period of fifteen years show that as good cereal crops can be grown following a crop of beans as after summer fallow. It costs \$6 per acre more to grow, harvest and market a crop of beans than it does to summer fallow an equal area. The beans yield about 800 pounds per acre and sell for 3 cents per pound, or \$24 per acre. This leaves a margin of \$18 in favor of growing beans.

SKUNKS VERSUS BEES.

In view of the good word spoken in behalf of the skunk in a recent government bulletin and referred to in this department, particularly as a voracious devourer of cocoons of range caterpillars, it is a somewhat damaging charge which a reader of the Rural New Yorker makes against the skunk as a ruthless destroyer of his bees. He noticed that his hives were becoming so depleted that they were not producing any honey and, suspecting skunks as the cause, set traps and caught three. If readers of this department have had their hives dwindle during the summer months it would be well for them to follow up the above clue and see if skunks are the cause.

AID FOR FARMERS

Can the Grange Help Solve Agriculturists' Problems?

Some Pertinent Questions Asked and Some Suggestions Made—Vocational Education of the Most Liberal Kind Demanded—Co-operation Necessary.

There is a movement in the north west that is attracting attention, and organizations are springing up in several places to solicit funds by private subscription to employ experts and establish demonstration farms for the purpose of teaching the farmers more scientific and better methods of farming.

Complaints are made that in many cases the farmers do not appreciate this service and are not availing themselves of it as they should. It may be well to inquire why the farmers as a class do not welcome this innovation, why they think that it will not solve their problems. Why select agriculture as the one and only great industry in the nation requiring this special education at the private expense of those indirectly interested? What effect will it have on the industry and those engaged in it? Have they not kept pace with other industries in improved methods of production?

Our competitors in the world's markets have had the advantage of state owned and operated railroads for transportation at cost and in some instances state owned elevators, and yet we have met them, paying all the traffic would bear over our privately owned railroads and through our privately owned elevators. What other industry has or could have done so well?

In all these external efforts to aid the farmer, from Presidents Taft and Wilson, the main object, as stated, is to increase production so as to reduce the high cost of living, indirectly placing the whole blame for the high cost of living on the farmer, which is not true and is not fair.

If increased production means lower prices, and it does, how will it help the farmer to produce more and get less for it? Food products have not increased in price as rapidly as other products. Under our present system of uncontrolled marketing the farmer does not receive as much for the bumper crop as for the medium or average crop. How does the price of farm products compare with twenty years ago? Can the farmer produce as cheaply as he could twenty years ago? Can the farmer exchange the products of his farm for as much of the things he needs as he could twenty years ago? That is the true test.

In discussing this question I wish it distinctly understood that I am doing so from a general or national standpoint and any apparent criticisms are not intended to apply to the many generous men who are locally trying to assist the farmers. I believe in better farming, in scientific farming, in bringing practical education as close to the farm as possible. It is absolutely necessary so long as our competitors are doing so. Indeed, our competitors are spending much more per capita for the encouragement and development of agriculture than we are.

What I wish to emphasize is that if it is better education the farmer needs it should be at public expense. Increase our public educational facilities, not only for the farmer, but the mechanic, the manufacturer, the banker, the railroad manager and the commercial men and women. Treat all alike. Let it be vocational education of the most liberal kind, the best investment that state and nation can make.

The education the farmer now needs the most is along the lines of co-operative transportation, distribution and marketing. Every other great industry pays as much, if not more, attention to distribution and sale than to production, many of them fixing the price the customer must pay before the product leaves the factory. The farmer alone, on the advice of other interests, limits his efforts to production and permits those other interests to take charge of the more important functions of distribution and sale. There is where the profits go. There is where the big margin is between what the farmer receives and the consumer pays. The organized farmers have their eyes on that margin—H. L. Loucks.

Missouri Grange Educational Fund.

The Missouri state grange has started a movement to raise by popular subscription a fund from which young men and women can borrow on personal unindorsed notes to assist them in obtaining education. It purposes to make the loans "debts of honor."

Graduates who fulfill their obligations will be placed on a roll of honor. It is expected that the movement will be self-perpetuating and that those assisted will assist others.

There will not be any restriction of the lines of education chosen by applicants. The student may choose his own profession or business. Annual advances will be made to defray the expenses of the student.

C. O. Raine of Canton, Miss Lora Scott of Columbia, N. M. Henderson of Benjamin, Mrs. Edward Webster of Hannibal and W. P. Milkless of Pleasant Hill were elected trustees.

Farm and Garden

WINTER SPRAYING FOR TREES

Dormant Spraying is the Only Method For Destroying Certain Pests.

There is long list of tree pests, enemies of fruit yields and actual destroyers of the trees, that should be vigorously fought in winter, says a writer in Farm Progress. So far the only method discovered for combating them is by winter spraying.

Late winter is the time for "annual housecleaning" in the orchards. The list of enemies that can be checked or entirely wiped out by winter or dormant spraying is rather long and includes the San Jose scale, anthracnose, aphids, woolly aphis, codling moth, brown mite, red spider and powdery mildew.

When you spray, spray thoroughly. Winter spraying is no exception to the rule, and the spray material should be put on with force enough to reach all the lurking enemies. Thorough spraying brings up the question of proper equipment. All the bark must be wetted. At least 100 pounds of pressure is necessary, and in some cases I have found 150 to 200 pounds of pressure giving the best results. It must be driven into the bark cracks and crevices.

The man who is just beginning to take up the question of winter spray-

SPRAYING TREES FROM THE ROADWAY

ing ought to be able to distinguish the different kinds of enemies found on the trees in winter. He ought to buy a good pocket lens, costing about 75 cents, and carefully study all the parasites, scales and fungi he can find.

In battling with mildew, mites, spiders and moths all infected trees should be pruned and the dead and decaying parts removed. All wounds should be cleaned out and the flaking scaling bark ought to be scraped away from the trunks. Let this work precede the spraying with lime-sulphur. All rubbish should be burned at once. This will expose all the hibernating pests so the spray will reach them easily. Every part of the tree ought to be bathed in the film of spray even to the tiniest twig. The best time for applying sprays to the pests mentioned is a short time before the buds show signs of swelling.

Bordeaux 6-4-50 is the spray used most in late winter spraying, when the lime-sulphur is deemed inadequate. It is very effective in dealing with anthracnose and incipient cases of peach leaf curl. To be really effective the spray should be put on at a dry time, as a fall of rain will wash off much of the spraying material and lessen its effectiveness.

The one pest that ought to be fought hardest by the winter sprayer is the San Jose scale. Look for the round, grayish and black, button shaped bodies with a pimple-like elevation in the center. This elevation is about the size of a pin head and is often surrounded by a red ring. Lime-sulphur solution properly applied will kill the San Jose scale at any date between the falling of the leaves and the leafing out in spring.

There are three rules that I think every man should apply in going about spraying, whether he is doing the work in winter or in summer. They are:

When you spray, be sure you are doing it at the right time.

If you don't know the reason why you are spraying, don't spray at all.

The only way to know the reasons for spraying is to study up on every insect or fungus that is causing you trouble now or may trouble you in the near future.

Men no longer argue about the value of spraying. That has been settled for all time. The scabbed, sound and smooth skinned fruit of the sprayed orchard has settled that question. All that remains for us to know is the when and the how.

Barnyard Manure.

Barnyard manure is indispensable as a fertilizer on thin and sandy land that is to be farmed. It supplies humus as well as nitrogen, and the effect of the humus is often more desirable than the increase of plant food, though both are surely needed if the land be thin.

Crop Improvement

Ask your Congressman if your County Farm Bureau is in the Budget. It's up to YOU.

COUNTY PROGRAM CROP IMPROVEMENT

A Practical Demonstration and Discussion of How to Establish a Single Variety of Each Kind of Grain Best Adapted to the Soil and Climate of the County.

It has been demonstrated a great many times that unless a man actually does things for himself that it will not do a great deal of good merely to tell him or have him read about how to do it. This actual demonstration is the main recommendation of the Crop Improvement Committee working through the county farm bureaus to be added to the old idea of institute lecturing which is all very well in its way, but which is gradually being set aside for practical demonstration by the farmer himself. The program suggested for the next few weeks before seeding time is somewhat as follows.

A Single Variety.

I.—The best type of corn, oats, barley and wheat adapted to the soil and climate of the county. Demonstrations and discussions led by the State Experiment Station. If it is found impossible to secure an agronomy professor, insist that he send you samples of the grain which he recommends for your territory and have the subject led by the best grain growers in your section as to the merits of this type, so that all will agree that preferably one type may be selected to be grown by all, so that ultimately it may be had in carloads free from mixtures and weed seeds.

Germination Tests.

II.—Germination tests with Blotter and Rag Doll testers. Demonstrations and discussions led by the superintendent of the county schools, by members of the Boys' Corn Club or by the seed selection committee which is established under the farm bureau. This demonstration should be started a week before the meeting, and samples of fair types of every kind of grain be shown actually germinated in the blotting-paper, Rag Doll or Germination Box testers. In this connection, the committee should be enlarged so that every school district is taken care of, so that a demonstration may be made for every farmer, a certificate being given him showing the seed condition of his grain, and a tabulation made from every school district and published in the county newspapers, just prior to the date of a meeting to be held later on.

The Crop Improvement Committee of Chicago will supply the blank certificates free and will also furnish Blotters and Rag Dolls at cost. If you prefer to make your own testers, either blotter or cloth, they will give you careful directions.

Eradicate Foul Seeds.

III.—Purity tests. The mixed condition of all our grains is something deplorable and it will be impossible to grow thoroughbred seeds until weeds and mixtures are eliminated. There is a good laboratory at your agricultural college, and if you will write the dean he will no doubt send some one to demonstrate a practical method of selecting a pure type and he will also tell you how to combat dangerous weeds.

Fanning the Seed Grains.

IV.—Fanning and cleaning of seeds. The manufacturers of fanning and grading machinery are generally willing, through their local agents, to give practical demonstrations to show how to fan and re-fan, until every thing is removed from your seed grain except the plumpest and most robust seeds. This can often be done in the nature of a contest, and the work should be done by spectators rather than experts. You should have each member bring a sack of grain, and a grain show so arranged would add to the interest.

Grain Diseases.

V.—The treatment of grain diseases, especially smut. Demonstrations with formaldehyde by sprinkling, by dipping or by machines, also hot water treatment, for smut not affected by formaldehyde. Ask the dean of your college to send some one who will demonstrate this and show the importance of doing it properly.

Selling on Its Merits.

VI.—Demonstrations by your state department showing the advantages of selling your surplus grain by grading on its merits. This subject should be followed by a discussion of how to keep from mixing all kinds of grain, good, bad and indifferent, into the same bin at the elevator. This can be accomplished by your seed committee and a plan made whereby each different grade may be marketed systematically, so that inferior grades may not be mixed in. It is obvious that this work cannot be done at the latest minute when there is a line of urgent drivers waiting to dump at the elevator. The seed committee should arrange this delivery to the elevator so that every man would know at what time his particular kind of grain is to be shipped.

A balanced ration means a balance on the right side of the ledger. Clover, cattle and corn silage makes a good combination.

Good silage in winter and good pasture in summer make green feed the year round.—G. R. Bliss.

CHAPTER VII.

A Faithful Crayon-Point.

Leslie Wrangle came out on the eleven-thirty. Hetty was at the station with the motor, a sullen resentment in her heart, but a welcoming smile on her lips. The sun shone brightly. The sound glared with the white of reflected skies.

"I thought of catching the eight o'clock," he cried enthusiastically, as he dropped his bag beside the motor in order to reach over and shake hands with her. "That would have gotten me here hours earlier. The difficulty was that I didn't think of the eight o'clock until I awoke at nine."

"And then you had the additional task of thinking about breakfast," said Hetty, but without a trace of sarcasm in her manner.

"I never think of breakfast," said he amiably. "I merely eat it. Of course, it's a task to eat it sometimes, but—well, how are you? How do you like it out here?"

He was beside her on the broad seat, his face beaming, his gay little mustache pointing upward at the ends like oblique brown exclamation points, so expansive was his smile.

"I adore it," she replied, her own smile growing in response to his. It was impossible to resist the good nature of him. She could not dislike him, even though she dreaded him deep down in her heart. Her blood was hot and cold by turns when she was with him, as her mind opened and shut to thoughts pleasant and unpleasant with something of the regularity of a fish's gills in breathing.

"When I get to heaven I mean to have a place in the country the year round," he said conclusively.

"And if you don't get to heaven?"

"I suppose I'll take a furnished flat somewhere."

Sara was waiting for them at the bottom of the terrace as they drove up. He leaped out and kissed her hand.

"Much obliged," he murmured, with a slight twist of his head in the direction of Hetty, who was giving orders to the chauffeur.

"You're quite welcome," said Sara, with a smile of understanding. "She's lovely, isn't she?"

"Enchanting!" said he, almost too loudly.

Hetty walked up the long ascent ahead of them. She did not have to look back to know that they were watching her with unfaltering interest. She could feel their gaze.

"Absolutely adorable," he added, enlarging his estimate without really being aware that he voiced it.

Sara shot a look at his rapt face, and turned her own away to hide the queer little smile that flickered briefly and died away.

Hetty, pleading a sudden headache, declined to accompany them later on in the day when they set forth in the car to "pick up" Brandon Booth at the inn. They were to bring him over, bag and baggage, to stay till Tuesday.

"He will be wild to paint her," declared Leslie when they were out of sight around the bend in the road. He had waved his hat to Hetty just before the trees shut off their view of her. She was standing at the top of the steps beside one of the tall Italian vases.

"I've never seen such eyes," he exclaimed.

"She's a darling," said Sara and changed the subject, knowing full well that he would come back to it before long.

"I'm mad about her," he said simply, and then, for some unaccountable reason, gave over being loquacious and lapsed into a state of almost lugubrious quiet.

She glanced at his face, furtively at first, as if uncertain of his mood, then with a prolonged stare that was frankly curious and amused.

"Don't lose your head, Leslie," she said softly, almost purring.

He started. "Oh, I say, Sara, I'm not likely to—"

"Stranger things have happened," she interrupted, with a shake of her head. "I can't afford to have you making love to her and getting tired of the game, as you always do, dear boy, just as soon as you find she's in love with you. She is too dear to be hurt in that way. You mustn't—"

"Good Lord!" he cried; "what a boulder you must take me for! Why, if I thought she'd— But nonsense! Let's talk about something else. Yourself, for instance."

She leaned back with a smile on her lips, but not in her eyes; and drew a long, deep breath. He was hard hit. That was what she wanted to know.

They found Booth at the inn. He was sitting on the old-fashioned porch, surrounded by bags and boys. As he climbed into the car after the bags, the boys grinned and jingled the coins in their pockets and ventured, almost in unison, the intelligence that they

would all be there if he ever came back again. Big and little, they had transported his easel and canvases from place to place for three weeks or more and his departure was to be regarded as a financial calamity.

Leslie, perhaps in the desire to be alone with his reflections, sat forward with the chauffeur, and paid little or no heed to the unhappy person's comments on the vile condition of all village thoroughfares, New York city included.

"And you painted those wretched little boys instead of the beautiful things that nature provides for us out

"Enchanting!" said he, almost too loudly.

here, Mr. Booth?" Sara was saying to the artist beside her.

"Of course I managed to get a bit of nature, even at that," said he, with a smile. "Boys are pretty close to earth, you know. To be perfectly honest, I did it in order to get away from the eminently beautiful but unnatural things I'm required to paint at home."

"I suppose we will see you at the Wrangle place this summer."

"I'm coming out to paint Leslie's sister in June, I believe. And that reminds me, I came upon an uncommonly pretty girl not far from your place the other day—and yesterday, as well—some one I've met before, unless I'm vastly mistaken. I wonder if you know your neighbors well enough—by sight, at least—to venture a good guess as to who I mean."

She appeared thoughtful.

"Oh, there are dozens of pretty girls in the neighborhood. Can't you remember where you met—?" She stopped suddenly, a swift look of apprehension in her eyes.

He failed to note the look or the broken sentence. He was searching in his coat pocket for something. Selecting a letter from the middle of a small pocket, he held it out to her.

"I sketched this from memory. She posed all too briefly for me," he said.

On the back of the envelope was a remarkably good likeness of Hetty Castleton, done broadly, sketchily, with a crayon point, evidently drawn with haste while the impression was fresh, but long after she had passed out of range of his vision.

"I know her," said Sara quietly. "It's very clever, Mr. Booth."

"There is something hauntingly familiar about it," he went on, looking at the sketch with a frown of perplexity. "I've seen her somewhere, but for the life of me I can't place her. Perhaps in a crowded street, or the theater, or a railway train—just a fleeting glimpse, you know. But in any event I got a lasting impression. Queer things like that happen, don't you think so?"

Mrs. Wrangle leaned forward and spoke to Leslie. As he turned, she handed him the envelope, without comment.

"Great Scott!" he exclaimed.

"Mr. Booth is a mind reader," she explained. "He has been reading your thoughts, dear boy."

Booth understood, and grinned.

"You don't mean to say—" began the dumfounded Leslie, still staring at the sketch. "Upon my word, it's a wonderful likeness, old chap. I didn't know you'd ever met her."

"Met her?" cried Booth, an amiable conspirator. "I've never met her."

"See here, don't try anything like that on me. How could you do this if you've never seen—"

"He is a mind reader," cried Sara. "Haven't you been thinking of her steadily for—well, we'll say ten minutes?" demanded Booth.

Leslie reddened. "Nonsense!"

"That's a mental telepathy sketch," said the artist, complacently.

"When did you do that?"

"This instant, you might say. See! Here is the crayon point. I always carry one around with me for just such—"

"All right," said Leslie blandly, at the same time putting the envelope in his own pocket; "we'll let it go at that. If you're so clever at mind pictures you can go to work and make another for yourself. I mean to keep this one."

"I say," began Booth, dismayed.

"One's thoughts are his own," said the happy possessor of the sketch. He turned his back on them.

Sara was contrite. "He will never give it up," she lamented.

"Is he really hard hit?" asked Booth in surprise.

"I wonder," mused Sara.

"Of course he's welcome to the sketch, confound him."

"Would you like to paint her?"

"Is this a commission?"

"Hardly. I know her, that's all. She is a very dear friend."

"My heart is set on painting some one else, Mrs. Wrangle."

"Oh!"

"When I know you better I'll tell you who she is."

"Could you make a sketch of this other one from memory?" she asked lightly.

"I think so. I'll show you one this evening. I have my trusty crayon about me always, as I said before."

Later in the afternoon Booth came face to face with Hetty. He was descending the stairs and met her coming up. The sun streamed in through the tall windows at the turn in the stairs, shining full in her uplifted face as she approached him from below. He could not repress the start of amazement. She was carrying a box of roses in her arms—red roses whose stems protruded far beyond the end of the pasteboard box and reeked of a fragrant dampness.

She gave him a shy, startled smile as she passed. He had stopped to make room for her on the turn. Somewhat dazed, he continued on his way down the steps, to suddenly remember with a twinge of dismay that he had not returned her polite smile, but had stared at her with most unblinking fervor. In no little shame and embarrassment he sent a swift glance over his shoulder. She was walking close to the banister rail on the floor above. As he glanced up their eyes met, for she too had turned to peer.

Leslie Wrangle was standing near the foot of the stairs. There was an eager, exalted look in his face that slowly gave way to well-assumed unconcern as his friend came upon him and grasped his arm.

"I say, Leslie, is she staying here?" cried Booth, lowering his voice to an excited half-whisper.

"Who?" demanded Wrangle vacantly. His mind appeared to be elsewhere.

"Why, that's the girl I saw on the road—Wake up! The one on the envelope, you ass. Is she the one you were telling me about in the club—the Miss What's-Her-Name who—"

"Oh, you mean Miss Castleton. She's just gone upstairs. You must have met her on the steps."

"You know I did. So that is Miss Castleton."

"Ripping, isn't she? Didn't I tell you so?"

"She's beautiful. She is a type, just as you said, old man—a really wonderful type. I saw her yesterday—and the day before."

"I've been wondering how you managed to get a likeness of her on the back of an envelope," said Leslie sarcastically. "Must have had a good long look at her, my boy. It isn't a snap-shot, you know."

Booth flushed. "It is an impression, that's all. I drew it from memory, on my soul."

"She'll be immensely gratified, I'm sure."

"For heaven's sake, Les, don't be such a fool as to show her the thing," cried Booth in consternation. "She'd never understand."

"Oh, you needn't worry. She has a fine sense of humor."

Booth didn't know whether to laugh or scowl. He compromised with himself by slipping his arm through that of his friend and saying heartily:

"I wish you the best of luck, old boy."

"Thanks," said Leslie drily.

(TO BE CONTINUED.)

Kickapoo Worm Killer Expels Worms

The cause of your child's ills—the foul, fetid, offensive breath—the starting up with terror and grinding of teeth while asleep—the sallow complexion—the dark circles under the eyes—all are indications of worms. Kickapoo Worm Killer is what your child needs; it expels the worms, the cause of the child's unhealthy condition. For the removal of seat, stomach and pin worms, Kickapoo Worm Killer gives sure relief. Its laxative effect adds tone to the general system. Supplied as a candy confection—children like it. Buy box today. Price 25c. All druggists or by mail.

ARCTIC HOLIDAY DE LUXE.

Syndicate Invites Passengers at \$1,000 Each For Gold Search.

If the newly formed London Exploration syndicate raises the necessary funds its proposed expedition to Baffin island, in the arctic, in search of gold, under the leadership of Captain Munn, will be carried out on a comparatively luxurious scale. The syndicate's prospectus invites passengers at \$200 (about \$1,000) a head for a four months' voyage. Sport will be included, and each passenger will be allowed one polar bear, one seal, one walrus, two musk oxen, one wolf and two white foxes, which he himself must shoot.

The ship will be fitted with electric lights. Passengers will be provided with separate sleeping cabins and bathrooms with hot and cold water. A library will be carried, and the best wines, spirits and cigars will be available.

The KITCHEN CUPBOARD

WHEN EGGS ARE AVAILABLE.

THE reduction in the price of eggs as spring approaches and the advent of Lent turns the housewife's attention to methods of serving eggs. Some delicious ways of preparing them are here suggested:

Scalloped Eggs.—Take six eggs, slice them and season with salt, pepper, one teaspoonful each of chopped parsley and grated cheese. Cover with one pint of white sauce made with stock. Sprinkle with one-half cupful of cracker crumbs, dot with butter and place in oven until a light brown.

Nourishing Preparations.

Eggs Piquant.—Take six eggs, a quarter of a pound of cheese, one-third of a cupful of cream or milk, two tablespoonfuls of butter, one teaspoonful of mustard, one-half teaspoonful of salt and a dash of cayenne. Shave the cheese into thin chips, butter an egg dish or a small baking dish and spread the cheese in it. On the cheese arrange in small portions the tablespoonful of butter; mix salt, cayenne, mustard and cream; pour half of the milk over the cheese, break the eggs into the dish, and after pouring over them the remaining milk place in the oven and bake.

Parmesan Eggs.—Take six eggs, boil them hard and take off the whites and cut them up into large pieces. Mash the yolks smooth with one tablespoonful of oil, one of mustard, a dash of paprika, salt and two drops of tabasco sauce. Mix the whites with a cupful of white sauce and put the yolks through a sieve, lay the whites on hot buttered toast sprinkled with Parmesan cheese and place the yolks on top.

A Delicatable Dessert.

Egg Fluff.—Take four eggs, three gills of milk, sugar to taste and lemon rind and vanilla to flavor. Put the milk in a saucepan with sugar to sweeten it and add the rind of half a lemon. Let this steep slowly at the side of the range for half an hour; then remove the peel. Separate the yolks from the whites of the eggs and whisk the whites to a stiff froth and no liquid remains. Bring the milk to a boiling point, drop the egg froth—a tablespoonful at a time—and keep turning them until sufficiently cooked; then place them in a glass dish. Beat up the yolks of the eggs, add them to the milk, mix thoroughly and then strain through a wet cloth. Put into a bowl and set the bowl in a saucepan of boiling water. Stir it one way until the mixture thickens. Do not allow it to boil, else it will curdle. Pour this custard over the eggs. They should rise to the surface. Serve cool.

Anna Thompson

FASTER OCEAN LINERS.

Thirty Knot Ships Wait on the Genius of Engine Designers.

In the year recently ended we have seen the last word in modern ship-building appear in New York harbor, and it would perhaps be interesting to consider the strides made in this century. In 1900 the twenty-three knot Deutschland won the blue ribbon of the Atlantic, and when the Cunarders with twenty-six knots to their credit obtained the place it was prophesied that in a few years the four day thirty knot boat would be seen; but, though the sizes of ships have increased and shortly the giant Imperator will no longer be the mammoth of the seas, the speed has dropped. Economy in space, in fuel, in cost of operation, has compelled a halt, and we seem to have reached for the moment the practical, highest speed of a transatlantic boat.

That the limit is actually reached is hardly possible, but the burden of increased speed lies now not with the ship designer, but with the engine designer. A smaller engine of higher speed with some as yet unknown reduction gear and we shall have the thirty knot boat in economical practical form. The ship can stand it. Can the engine designer design it?—American Machinist.

Stubborn, Annoying Coughs Cured.

"My husband has a cough for fifteen years and my son for eight years. Dr. King's New Discovery completely cured them, for which I am most thankful," writes Mrs. David Moor, of Saginaw, Ala. What Dr. King's New Discovery did for these men, it will do for you. Dr. King's New Discovery should be in every home. Stops hacking coughs, relieves la grippe and all throat and lung ailments. Money back if it fails. All druggists. Price 50c and \$1.00. Recommended by H. H. Carter Drug Co., Seymour, Ind.

And Never Rests.

A lie has no legs and cannot stand, but it has wings and can fly far and wide.—Warburton.

Quite Pointed.

To crawl through a barbed wire fence, says a wit, is a piece of fun with some point in it.

Flattery.

The cloak of flattery is usually trimmed with praise, but lined with deceit.—Florida Times-Union.

Air We Breathe.

An ordinary human being uses up 267 cubic feet of air within the twenty-four hours.

The Return of Blood Eruptions

No Reason Why Anyone Should Suffer Such Disheartening Experience.

No case of poisoned blood is ever cured until the last destructive germ has been eliminated from the system. And the only remedy that is assimilated in the tissues and stimulates cellular activity to overcome harmful germs is the famous blood purifier, S. S. S.

The skin is but a fine network of tiny blood vessels, and the specific action of S. S. S. is declared by eminent authorities to be a pronounced stimulation of the activity of these cells.

The reason for this is in the peculiar action of S. S. S. which enables the cells in the skin to select from the blood the nutrient it requires for regeneration.

Not only this, but from the presence of some disturbing poison there is a local or general interference of nutrition to cause boils, carbuncles, abscesses and kidney troubles. S. S. S. so directs the local cells that the poison is rejected and eliminated from their presence.

This fact has been demonstrated year in and year out in a wonderful number of cases of severe skin eruption that had seemed to be incurable.

You can obtain S. S. S. at any well stocked drug store. If you insist upon it, but be sure you are not talked into something "just as good."

S. S. S. is prepared by the Swift Specific Co., 215 Swift Bldg., Atlanta, Ga. Write for their illustrated book on skin diseases.

Spring Blood and System Cleaner.

During the winter months impurities accumulate, your blood becomes impure and thick, your kidneys, liver and bowels fail to work, causing so-called "Spring Fever." You feel tired, weak and lazy. Electric Bitters—the spring tonic and system cleanser—is what you need; they stimulate the kidneys, liver and bowels to healthy action, expel blood impurities and restore your health, strength and ambition. Electric Bitters makes you feel like new. Start a four weeks' treatment—it will put you in fine shape for your spring work. Guaranteed. All druggists. 50c and \$1.00 at H. H. Carter Drug Co., Seymour, Ind.

SPECIAL TO WOMEN

The most economical, cleansing and germicidal of all antiseptics is

Paxtine

A soluble Antiseptic Powder to be dissolved in water as needed.

As a medicinal antiseptic for douches in treating catarrh, inflammation or ulceration of nose, throat, and that caused by feminine ills it has no equal. For ten years the Lydia E. Pinkham Medicine Co. has recommended Paxtine in their private correspondence with women, which proves its superiority. Women who have been cured say it is "worth its weight in gold." At druggists. 50c. large box, or by mail. The Paxton Toilet Co., Boston, Mass.

HELPFUL HINTS FOR HOUSEWIVES

Spoon Holder Attachment For
Cooking Pots.

One of the many minor inventions that are so useful in the kitchen is the kettle spoon holder designed by a Massachusetts man and shown in the illustration. It obviates the necessity of having a saucer, plate or cup standing near the cook to hold the stirring spoon when the latter is not in use. The holder is made of aluminium and consists of a saucer shaped piece with perforations and a hook by which it may be hung over the edge of a kettle, the wide portion inside. Then as the spoon is taken from the food it can be laid on the holder, and the drippings drop through the perforations into the contents of the kettle. Another advantage of the holder is the fact that the spoon is always at hand when wanted.

Right Way to Boil Ham.

The discussion of ways to boil ham may seem to some entirely superfluous, yet have you never noticed that some hams retain that rich red color and perfect taste, while others have a brownish color and the meat comes apart? This difference lies in the manner of boiling. A good ham put on in cold water and cooked slowly, or allowed to stand for awhile without cooking will lose much of its nutrition. The proper way to cook a ham is to put it on in water that is already hot, just beginning to simmer. If it can be kept at this temperature, which is a few degrees below the boiling point, so much the better. At any rate, it should not boil vigorously. For every pound of ham let it boil a quarter of an hour. Thus a sixteen pound ham would require four hours to properly cook. When put in hot water the outer layers of meat are cooked at once, thus preventing the escape of juices which will take place in cold water.

Cranberry Butter.

Two quarts of cranberries washed and put on to cook with water enough to just cover. When boiling hot put in one teaspoonful of soda, stir and skim; let cook until tender and the berries all mashed, then run through a wire flour sieve or fine colander. At the same time have three quarts of apples cooking. When done run through colander, mix cranberries and apples with two quarts of sugar; put in a flat granite pan, place in the oven with a moderate fire; let cook two and one-half or three hours, according to the heat of the oven; stir every thirty minutes.

Kentucky Corn Bread.

To one pint sifted white corn meal add one-half teaspoonful soda, one teaspoonful salt and if liked one or two tablespoonfuls sugar, one tablespoonful lard, two beaten eggs and enough buttermilk to make a thin batter. Have a well greased pan heated on top of the stove, pour the batter into this and bake one-half hour in a quick oven. There must be plenty of grease in the pan and it should be hot enough so that the batter when it is poured in will crisp around the edges.

To Restore a Dying Plant.

When a plant becomes too dry it is difficult to get the water to penetrate the dirt in the pot far enough to reach the roots, and you may pour water on all day and not revive your plant. But try placing the plant in a pan of water and let it absorb upward all the water it needs. When it has enough the water will bubble and your plant will be beautiful and alive again.

Macaroni In Tomato Sauce.

Boil one cupful of macaroni until tender, then drain. Make the sauce of one cupful of tomato, strained, one tablespoonful of flour and add butter and salt to taste. Alternate a layer of macaroni and sauce in a baking dish until filled. Sprinkle with buttered breadcrumbs and bake about twenty minutes.

Notice I. O. O. F.

Volley Jefferson has purchased a team and wagon and will engage in the transfer business.

Your standing in the community may be known at home. But how about those you do business with by correspondence alone?

Has it ever occurred to you that you are judged by the very stationery you use?

Many business houses have proved to their satisfaction — and profit — it pays to use good stationery.

Old Council Tree Bond asks to be judged by the business houses who have adopted it for all business stationery. A list of these would represent many of the leading houses in their lines. Won't you investigate?

NEWSY PARAGRAPHS.

Bottom Brothers have purchased a Buick, model 37, of the Stewart Garage.

John Osterman is acting as agent at the B. & O. S-W. in the absence of Thomas Kreinhagen.

James Burke, of Washington, spent Sunday here with his family. He is making arrangements to move his family to Washington in the near future.

As the result of the contest which

was conducted by the Seymour Public Service Company and which closed Saturday afternoon, Martin Steinwedel received the electric iron.

Virgil Ellerman, who has been night agent for the B. & O. S-W. here has been transferred to Brownstown where he will have charge of the baggage room. Guy Harris will take his place at the office here.

William Mareoni, inventor of the wireless telegraph, has obtained successful results with his new wireless telephone. Communication was carried on for nearly forty-five miles from ships at sea.

Walter Bottorff, a former Seymour

boy, appears in a group picture with thirty-six other representatives of the Redpath Lyceum Bureau. The picture was taken at a banquet given at the Lexington hotel, Chicago, Feb. 27.

F. W. Wesner, deputy prosecutor, went to Brownstown this morning and will look after the state business in the absence of Prosecutor Underwood who is giving his personal attention to the selection of committeemen in Lawrence county. The various precincts will elect committeemen today.

Mrs. F. A. Steele went to Princeton today on account of the death of her niece, Mrs. Arthur Book, which occurred Sunday after an illness of pneumonia and rheumatism. The deceased was about thirty years of age and is survived by her husband and two small children. The funeral will take place Tuesday afternoon.

Notice has been issued at the B. & O. Southwestern offices by Superintendent Hagerty that the jurisdiction of H. A. Cassil, division engineer, has been extended to include the Cincinnati Terminals. The terminals were formerly under the jurisdiction of C. H. R. Howe, who has been transferred to another division.

Battle May be Raging.
By United Press

Mexico City, March 16—The city of Torreon is completely cut off from all outside communication and it is believed that the biggest battle of the Mexican revolution is in progress there today.

We do "Printing that Pleases."
